Frith,2023-11-02 *Object Lessons* is a series of short beautifully designed books about the hidden lives of ordinary things Barcodes are about as ordinary as an object can be Billions of them are scanned each day and they impact everything from how we shop to how we travel to how the global economy is managed But few people likely give them more than a second thought In a way the barcode's ordinariness is the ultimate symbol of its success However behind the mundanity of the barcode lies an important history Barcodes bridged the gap between physical objects and digital databases and paved the way for the contemporary Internet of Things the idea to connect all devices to the web They were highly controversial at points protested by consumer groups and labor unions and used as a symbol of dystopian capitalism and surveillance in science fiction and art installations This book tells the story of the barcode's complicated history and examines how an object so crucial to so many parts of our lives became more ignored and more ordinary as it spread throughout the world *Object Lessons* is published in partnership with an essay series in *The Atlantic*     **The Best 100 Free Apps for Libraries** Jim

imaging and high throughput technologies for functional and chemical genomics provide unprecedented opportunities to understand how biological processes work in subcellular and multicellular systems. The interdisciplinary research field of Video Bioinformatics is defined by Bir Bhanu as the automated processing, analysis, understanding, data mining, visualization, query-based retrieval, storage of biological spatiotemporal events, data and knowledge extracted from dynamic images and microscopic videos. Video bioinformatics attempts to provide a deeper understanding of continuous and dynamic life processes. Genome sequences alone lack spatial and temporal information and video imaging of specific molecules and their spatiotemporal interactions using a range of imaging methods are essential to understand how genomes create cells, how cells constitute organisms and how errant cells cause disease. The book examines interdisciplinary research issues and challenges with examples that deal with organismal dynamics, intercellular and tissue dynamics, intracellular dynamics, protein movement, cell signaling and software and databases for video bioinformatics. Topics and Features: Covers a set of biological problems, their significance, live imaging experiments, theory and computational methods, quantifiable experimental results and discussion of results. Provides automated methods for analyzing mild traumatic brain injury over time, identifying injury dynamics after neonatal hypoxia, ischemia and visualizing cortical tissue changes during seizure activity as examples of organismal dynamics. Describes techniques for quantifying the dynamics of human embryonic stem cells with examples of cell detection, segmentation, spreading and other dynamic behaviors which are important for characterizing stem cell health. Examines and quantifies dynamic processes in plant and fungal systems such as cell trafficking, growth of pollen tubes in model systems such as *Neurospora Crassa* and *Arabidopsis*. Discusses the dynamics of intracellular molecules for DNA repair and the regulation of cofilin transport using video analysis. Discusses software system and database aspects of video bioinformatics by providing examples of 5D cell tracking by FARSIGHT, open source toolkit, a survey on available databases and software, biological processes for non-verbal communications and identification and retrieval of moth images. This unique text will be of great interest to researchers and graduate students of Electrical Engineering, Computer Science, Bioengineering, Cell Biology, Toxicology, Genetics, Genomics, Bioinformatics, Computer Vision and Pattern Recognition, Medical Image Analysis and Cell Molecular and Developmental Biology. The large number of example applications will also appeal to application scientists and engineers. Dr. Bir Bhanu is Distinguished Professor of Electrical and Computer Engineering, Interim Chair of the Department of Bioengineering, Cooperative Professor of Computer Science Engineering and Mechanical Engineering and the Director of the Center for Research in Intelligent Systems at the University of California, Riverside, California, USA. Dr. Prue Talbot is Professor of Cell Biology, Neuroscience and Director of the Stem Cell Center and Core at the University of California, Riverside, California, USA.
