Solving quadratic inequalities can seem like a daunting task, but we just need to break these questions down and choose the best approach from our options.

To be able to solve these, you will need to be able to solve quadratic equations (either by factorising or using formula) and sketch quadratic graphs.

Let's look at a couple of examples to see how we can approach these.

e.g. Solve the inequality  $x^2 - 2x - 3 \geq 0$ .

**Step 1:**

Imagine that this is an equation and solve it as normal using either factorisation or the quadratic formula:

$$x = -1 \text{ and } x = 3$$

So if we draw the graph for  $y = x^2 - 2x - 3$ , these two points are where the graph crosses the  $x$  axis.

**Step 2:**

Sketch the quadratic graph:
