Optimization with NuOPTTM, S-PLUS®, and S+BayesTM Bernd Scherer,R. Douglas Martin,2007-09-05 In recent years portfolio optimization and construction methodologies have become an increasingly critical ingredient of asset and fund management while at the same time portfolio risk assessment has become an essential ingredient in risk management and this trend will only accelerate in the coming years Unfortunately there is a large gap between the limited treatment of portfolio construction methods that are presented in most university courses with relatively little hands on experience and limited computing tools and the rich and varied aspects of portfolio construction that are used in practice in the finance industry Current practice demands the use of modern methods of portfolio construction that go well beyond the classical Markowitz mean variance optimality theory and require the use of powerful scalable numerical optimization methods This book fills the gap between current university instruction and current industry practice by providing a comprehensive computationally oriented treatment of modern portfolio optimization and construction methods The computational aspect of the book is based on extensive use of S Plus the S NuOPTTM optimization module the S Plus Robust Library and the S BayesTM Library along with about 100 S Plus scripts and some CRSP sample data sets of stock returns A special time limited version of the S Plus software is available to purchasers of this book For money managers and investment professionals in the field optimization is truly a can of worms rather left un opened until now Here lies a thorough explanation of almost all possibilities one can think of for portfolio optimization complete with error estimation techniques and explanation of when non normality plays a part A highly recommended and practical handbook for the consummate professional and student alike Steven P Greiner Ph D Chief Large Cap Quant Fundamental Research Manager Harris InvestmentManagement The authors take a huge step in the long struggle to establish applied post modern portfolio theory The optimization and statistical techniques generalize the normal linear model to include robustness non normality and semi conjugate Bayesian analysis via MCMC The techniques are very clearly demonstrated by the extensive use and tight integration of S Plus software Their book
