

Quality Assurance Report

The overall quality assurance objective for measurement data was to ensure that data of known and acceptable quality were obtained. All sampling, isolation, and analytical testing were to be performed to yield consistent results that are representative of the media and conditions measured. All data were to be recorded and reported in terminology consistent with that of other agencies and organizations to ensure comparable results. A complete description of the quality assurance procedures can be found in the sampling and analysis plan (Herrera 2003). The following sections include a description of the fecal coliform bacteria and ribotyping data quality assessment procedures and results.

Bacterial Enumeration

No major quality control problems were identified in this study. Values associated with minor quality control problems were considered estimates and assigned J or G qualifiers (see explanation below). Estimated values were used for evaluation purposes. The following section describes data assessment procedures, quality control problems, and corrective actions taken for the following quality control elements:

- Completeness
- Methodology
- Holding times
- Blanks
- Laboratory duplicates
- Field duplicates

Completeness

A total of 80 water samples were collected in accordance with the sampling and analysis plan. All water samples were analyzed for fecal coliform bacteria and resulted in valid data. No recollection or reanalysis of samples was required.

Methodology

Methodology was assessed by examining the field notebook and laboratory reports. No
