

BIOLOGY

Biology

Biology is the study of living things! It helps us understand how plants and animals work. Did you know that plants make their own food? They do it through a process called **photosynthesis**. During this process plants use the energy from the sun to turn water and carbon dioxide into glucose, which is a kind of sugar that the plant can use for food.

Animals, on the other hand, have to eat food to survive. They might eat plants, or they might eat other animals. Some animals, like lions and tigers, are called **predators** because they hunt and kill other animals for food. Other animals, like cows and sheep, are called **herbivores** because they only eat plants. There are also animals that eat both plants and other animals, like bears. They are called **omnivores**.

One of the most important parts of biology is studying the different parts of living things. For example, scientists who study plants look at their leaves, stems, roots, and flowers. They also study the different ways that plants grow and reproduce. Similarly, scientists who study animals look at their bodies, including their muscles, bones, and organs. They also study how animals move, communicate and breed.

Another interesting area of biology is **genetics**. This is the study of how traits are passed down from parents to their children. For example, your hair color, eye color and height is determined by the genes you inherit from your parents. Even your ability to roll your tongue is determined by your genes!

All living things are part of **ecosystems**. Ecosystems are made up of different living things and the environment around them. For example, a forest ecosystem would include trees, animals, birds, insects and also the soil, water and air. Biologists also study how different living things in an
