

TAMD41

6-cylinder, 4-stroke, direct-injected turbocharged marine diesel engine with aftershaft and reverse gear. Up to 147 kW (200 hp)†

Multi-fuel marine engine

Standard is a multi-fuel engine meeting engine with conventional diesel construction – designed for running both light oil and heavy fuel oil. Construction also allows for dual-fuel operation.

Direct injection

Direct injection (DI) results in a fuel that has been atomized and injected into the combustion chamber. This results in a more efficient engine.

Turbocharging

The engine is turbocharged with an exhaust driven turbocharger. This allows for better air flow and thus a more efficient engine. The turbocharger is located on the aftershaft and is driven by the exhaust gases. This results in a more efficient engine.

The turbocharger also allows for additional power to be generated by the engine.

Aftershaft

The aftershaft is a shaft that connects the engine to the propeller. It is made of steel and is designed to handle the torque generated by the engine. The aftershaft is also designed to handle the torque generated by the propeller.

Low exhaust emission levels

The low exhaust emission levels are achieved by the use of a low exhaust emission engine. This engine is designed to produce low levels of exhaust emissions.

Reverse gear

The reverse gear is a gear that allows the engine to run in reverse. This is useful for maneuvering the boat in tight spaces.

The reverse gear is also designed to handle the torque generated by the engine.
