

Repair instructions

The work methods described in the Workshop Manual are applicable for a workshop environment. The engine is therefore removed from the boat and mounted in an engine block. Renovation work which does not require removal of the engine is conducted in situ with the same work methods, unless otherwise stated.

The warning symbols used in the Workshop Manual (see *Information on Safety* for implication)

WARNING!

IMPORTANT!

NOTE!

These are in no way comprehensive, since we obviously cannot foresee everything, in that service work is conducted under the most various conditions. We can therefore only point out the risks which we consider can arise as a result of incorrect handling during work in a well-equipped workshop with work methods and tools which are proven by us.

In the Workshop Manual all the work procedures for which there are special Volvo Penta tools are conducted with these. The special tools are specially produced to facilitate the most safe and rational work method possible. It is therefore the responsibility of persons using other tools or another work method than that which we recommend to ensure that no risk of personal injury, material damage or malfunction can occur.

In some cases there may be special safety instructions and user instructions for the tools and chemicals named in the Workshop Manual. These instructions shall always be followed and there are no special instructions for this in the Workshop Manual.

By means of taking certain elementary procedures and using a modicum of common sense, most risk factors can be prevented. A clean workplace and a clean engine eliminate many risks both of personal injury and malfunction.

Especially during work on the fuel system, lubrication system, induction system, turbo, bearing unions and sealing unions, it is of the greatest importance that dirt or foreign particles do not get in, since this can result in malfunctioning or shorten the repair service-life.

Our joint responsibility

Each engine consists of a large number of interactive systems and components. The deviation of a component from the technical specification can dramatically increase the environmental impact from an otherwise first-rate engine. It is therefore of extreme importance to maintain the given wear tolerances, that systems capable of adjustment receive the correct setting, and that Volvo Penta Genuine Parts are used for the engine. The time intervals in the engine's maintenance schedule must be followed.

Certain systems, e.g. components in the fuel system, may require special competence and special test equipment. Certain components are sealed at the factory for environmental reasons. Work on sealed components must not be conducted unless authorisation for such work is held.

Remember that most chemical products, incorrectly used, are hazardous to the environment. Volvo Penta recommends the use of biologically decomposing degreasing agents for all cleaning of engine components, unless otherwise stated in the Workshop Manual. When working on board a boat pay special attention to make sure that oils and washing residue are handled correctly for destruction, and do not unintentionally end up in the nature, e.g. in the bilge-water.

Tightening torques

Tightening torque for vital unions, which should be tightened with dynamometric wrenches, is listed in "Specifications: Tightening torque" and indicated in the manual's work descriptions. All torque indications are applicable for cleaned threads, screw heads and mating surfaces. The torque indications refer to lightly oiled or dry threads. If lubricants, locking liquids or sealants are required for the screw union, the type is indicated in the work description and in "Tightening torques". General tightening torque as per the table below is applicable for unions where special torque indications are not given. The torque indication is a standard value and the union does not require tightening with a dynamometric wrench.

Size	Tightening torques	
	Nm	lbf.ft
M5	6	4.4
M6	10	7.4
M8	25	18.4
M10	50	36.9
M12	80	59.0
