

Phase 3: Anaerobic-endurance Training

- During phase 3, the primary focus is to improve performance.
- Assessment of the client's cardiorespiratory capacity at the second ventilatory threshold (VT2) is appropriate.
- Higher-intensity intervals that develop anaerobic endurance are introduced.
- Balancing training time spent below VT1, between VT1 and VT2, and at or above VT2 should be considered.
 - Zone 1 ($< VT1$): 70–80% of training time
 - Zone 2 ($VT1$ to $< VT2$): $<10\%$ of training time
 - Zone 3 ($\geq VT2$): 10–20% of training time
- The personal trainer should watch for signs of overtraining and scale back the program if symptoms occur.

Anaerobic Bacteria Dwight W. Lambe, 2012-12-06 A symposium seems an appropriate vehicle to review recent as well as new data on important topics It is therefore our goal to present a symposium on selected topics of importance every three years Some topics will be updated and new topics will be presented A vast amount of information has been accumulated over the past ten years on the significance of anaerobic bacteria in infectious diseases This symposium was organized to discuss laboratory aspects normal flora pathogenicity serology and the patient's immune response to anaerobic infection Important information on the patient's immune response and serology of anaerobes which has accumulated over the last few years made these topics an important part of the symposium Development of serological diagnostic tests undoubtedly will provide quicker and less expensive identification of certain anaerobic species in the future Utilization of the patient's immune response to anaerobic septicemia has the potential of providing a diagnosis of the causative agent within 24 hours after onset of symptoms The development of such diagnostic methods and the use of these methods in the clinical laboratory in the future would provide rapid diagnostic information to the clinician on these life threatening infections *Campylobacter* was included in the symposium to emphasize the important role of this organism in human acute gastroenteritis The pathogenesis of *Campylobacter* in gastroenteritis has been recognized in certain European countries since 1972 although we have recognized the importance of *Campylobacter* gastroenteritis in the United States only within the past two years
