**Domestic Microgeneration** Iain Staffell, Daniel J.L. Brett, Nigel P. Brandon, Adam D. Hawkes, 2015-06-19. Microgeneration producing energy for the home in the home is a substantial improvement over the current centralised and detached energy model employed the world over. Domestic Microgeneration is the first in depth reference work for this exciting and emerging field of energy generation. It provides detailed reviews of ten state of the art technologies including solar PV and thermal micro CHP and heat pumps and considers them within the wider context of the home in which they are installed and the way that they are operated. Alongside the many successes, this book highlights the common pitfalls that beset the industry. It offers best practice guidance on how they can be avoided by considering the complex linkages between technology, user, installer, and government. This interdisciplinary work draws together the social, economic, political, and environmental aspects of this very diverse energy genre into a single must have reference for academics and students of sustainability and energy related subjects, industry professionals, policy makers, and the growing number of energy literate householders who are looking for ways to minimise their environmental footprint and their energy bills with microgeneration.
