Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or a training group (TRN). The TRN group performed a 12-week training program consisting of three sessions per week. The HR and EE were measured at baseline and at the end of the 12-week training program. The TRN group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results of this study suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

This may require the `afs` to be installed. This type of multi-mount will be pointing on the `afs` group (see [page 1](#))

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light in commercial greenhouses. Likewise, plants are flowering the opposite way (e.g., in the middle of the night).
- Increased moisture in the soil will compete with the salt for absorption by the roots. The length of the growing season may be extended by the use of plastic mulch and irrigation.
- The soil pH can be adjusted by the use of lime to change the growing conditions. The growing medium is usually a peat-based, sterile substrate for these plants and is usually heavy. Sand can be added to the mix (about a 1:1 ratio).
