**Discrete Maths and Its Applications Global Edition 7e** Kenneth Rosen, 2012-09-16 We are pleased to present this Global Edition which has been developed specifically to meet the needs of international students of discrete mathematics. In addition to great depth in key areas and a broad range of real world applications across multiple disciplines, we have added new material to make the content more relevant and improve learning outcomes for the international student. This Global Edition includes an entire new chapter on Algebraic Structures and Coding Theory. New and expanded sections within chapters covering Foundations, Basic Structures, and Advanced Counting Techniques. Special online-only chapters on Boolean Algebra and Modeling Computation. New and revised problems for the international student integrating alternative methods and solutions. This Global Edition has been adapted to meet the needs of courses outside of the United States and does not align with the instructor and student resources available with the US edition. **Subject Guide to Books in Print**, 1997

Nonlinear optimization problems containing both continuous and discrete variables are called mixed integer nonlinear programs (MINLP). Such problems arise in many fields such as process industry, engineering, design, communications, and finance. There is currently a huge gap between MINLP and mixed integer linear programming (MILP) solver technology. With a modern state of the art MILP solver, it is possible to solve models with millions of variables and constraints, whereas the dimension of solvable MINLPs is often limited by a number that is smaller by three or four orders of magnitude. It is theoretically possible to approximate a general MINLP by a MILP with arbitrary precision. However, good MILP approximations are usually much larger than the original problem. Moreover, the approximation of nonlinear functions by piecewise linear functions can be difficult and time-consuming. In this book, relaxation and decomposition methods for solving nonconvex structured MINLPs are proposed. In particular, a generic branch and price (BCP) framework for MINLP is presented. BCP is the underlying concept in almost all modern MILP solvers. Providing a powerful decomposition framework for both sequential and parallel solvers, it made the success of the current MILP technology possible. So far, generic BCP frameworks have been developed only for MILP, for example COIN-BCP (IBM, 2003) and ABACUS (OREAS GmbH, 1999). In order to generalize MILP BCP to MINLP, BCP, the following points have to be taken into account. A given sparse MINLP is reformulated as a block separable program with linear coupling constraints. The block structure makes it possible to generate Lagrangian cuts and to apply Lagrangian heuristics. In order to facilitate the generation of polyhedral relaxations, nonlinear convex relaxations are constructed. The MINLP separation and pricing subproblems for generating cuts and columns are solved with specialized MINLP solvers.
