Ultra-Wideband, Short-Pulse Electromagnetics 3 Carl E. Baumann, Lawrence Carin, Alexander P. Stone, 2013-04-17
The first two international conferences on Ultra Wideband UWB Short Pulse SP Electromagnetics were held at Polytechnic University Brooklyn New York in 1992 and 1994 Their purpose was to focus on advanced technologies for generating radiating and detecting UWB SP signals on mathematical methods their propagation and scattering and on current as well as potential future applications The success of these two conferences led to the desirability of scheduling a third conference Impetus was provided by the electromagnetics community and discussions led by Carl Baum and Larry Carin resulted in the suggestion that the UWB conferences be moved around say to government laboratories such as Phillips Laboratory Consequently the decision was made by the Permanent HPEM Committee to expand AMEREM 96 to include the Third Ultra Wide Band Short Pulse UWB SP 3 with the Third Unexploded Ordnance Detection and Range Remediation Conference UXO and the HPEMINEM Conference in Albuquerque New Mexico during the period May 27 31 1996 Planning is now underway for EUROEM 98 in June 1998 in Tel Aviv Israel Joseph Shiloh is the conference chairman A fourth UWB SP meeting is planned as a part of this conference and Ehud Heyman will coordinate this part of the meeting The papers which appear in this volume the third in the UWB SP series update subject areas from the earlier UWB SP conferences These topics include pulse generation and detection antennas pulse propagation scattering theory signal processing broadband electronic systems and buried targets

The Way of Cane Eric Arbiter, 2020-07-31 As the sound producing mechanism for the bassoon the reed is a vital component in the sound of the entire instrument While pre manufactured reeds are widely available for purchase at music stores this one size fits all option hardly does justice to the unique needs of the musician and the piece Many bassoonists including seasoned professional bassoonist Eric Arbiter instead choose to craft their own reeds A nuanced and difficult craft to master reed making involves specialized machinery and necessitates special attention to the thickness and even topography of the reed itself When done correctly however this process results in a reed that not only produces a

more beautiful sound but also holds up to even the most demanding musical performances In *The Way of Cane* Arbiter demystifies this process for bassoonists of all levels of experience Drawing from his decades long experience as both musician and reed maker Arbiter provides a comprehensive yet accessible overview of the craft from the differing sound qualities produced by changing the dimensions of the reed s blades to the changes in the reed s behaviors as it passes through cycles of wetting and drying during production Small changes in each of these variables Arbiter explains contribute to the ultimate goal of producing a bassoonist s ideal sound With step by step instructions detailed photos that further illuminate the reed making process and a companion website featuring the author s own recordings *The Way of Cane* emphasizes the importance of the reed to the bassoon s sound as well as the harmony between reed and musician

Hydride vapour phase epitaxy growth, crystal properties and dopant incorporation in gallium nitride Patrick Hofmann, 2018-08-15 This dissertation employs doping to investigate basic gallium nitride GaN crystal properties and to solve challenges of the hydride vapour phase epitaxy HVPE growth process Whereas the first chapter is a short introduction to the history of the GaN single crystal growth the 2nd chapter introduces to current crystal growth techniques discusses properties of the GaN material system and the resulting influence on the applicable crystal growth techniques HVPE as a vapour phase epitaxy crystal growth method will be explained in greater detail with focus on the used vertical reactor and its capabilities for doping The 3rd chapter then focusses on point defects in GaN specifically on intentionally introduced

extrinsic point defects used for doping purposes i.e. to achieve p type n type or semi insulating behaviour Different dopants will be reviewed before the diffusion of point defects in a solid will be discussed The in situ introduction of iron manganese and carbon during crystal growth is employed in chapter 4 to compensate the unintentional doping of the GaN crystals and therefore to achieve truly semi insulating behaviour of the HVPE GaN However the focus of this chapter lies on the characterisation of the pyroelectric coefficient p as semi insulating properties are a necessary requirement for the applied Sharp Hall measurement method The creation of tensile stress due to in situ silicon doping during GaN crystal growth is the topic of the 5th chapter The tensile stress generation effect will be reproduced and the strain inside the crystal will be monitored ex situ employing Raman spectroscopy The n type doping is achieved by using a vapour phase doping line and a process is developed to hinder the tensile strain generation effect The 6th chapter concentrates on the delivery of the doping precursor via a solid state doping line a newly developed doping method Similar to chapter 5 the doping line is characterised carefully before the germanium doping is employed to the GaN growth The focus lies on the homogeneity of the germanium doping and it is compared compared to the silicon doping and the vapour phase doping line Benefits and drawbacks are discussed in conjunction with the obtained results The germanium doping via solid state doping line is applied to the HVPE GaN growth process to measure accurately growth process related properties unique to the applied set of GaN growth parameters
