T. O'Connor, 2011-09-13 Margaret Cargill s background as a linguist and research communications educator and Patrick O

Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the author's goal is to give scientists the tools to write and publish compelling well-documented clear narratives that convey their work honestly and in proper context, they have succeeded admirably. *Veterinary Pathology* July 2009. The book is clearly written, has a logical step-by-step structure, is easy to read, and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing. *Aquaculture International* April 2009. **Writing Scientific Research Articles: Strategy and Steps** guides authors in how to write as well as what to write to improve their chances of having their articles accepted for publication in international peer-reviewed journals. The book is designed for scientists who use English as a first or an additional language for research students and those who teach them paper writing skills, and for early career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments as well as ideas for developing discipline-specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at www.writeresearch.com.au for more information. **The Key To Scientific Paper Writing** Dr. Aniruddha Subhashchandra Rumale, 2025-07-21. The Polymerase Chain Reaction Kary B. Mullis, Francois Ferre, Richard A. Gibbs, 2012-02-02 James D Watson When in late March of 1953 Francis Crick and I came to write the first Nature paper describing the double helical structure of the DNA molecule Francis had wanted to include a lengthy discussion of the genetic implications of a molecule whose struc ture we had divined from a minimum of experimental data and on theoretical

arguments based on physical principles But I felt that this might be tempting fate given that we had not yet seen the detailed evidence from King's College Nevertheless we reached a compromise and decided to include a sentence that pointed to the biological significance of the molecule's key feature the complementary pairing of the bases It has not escaped our notice Francis wrote that the specific pairing that we have postulated immediately suggests a possible copying mechanism for the genetic material By May when we were writing the second Nature paper I was more confident that the proposed structure was at the very least substantially correct so that this second paper contains a discussion of molecular self duplication using templates or molds We pointed out that as a consequence of base pairing a DNA molecule has two chains that are complementary to each other Each chain could then act as a template for the formation on itself of a new companion chain so that eventually we shall have two pairs of chains where we only had one before and moreover *Full Circle Magazine #78*
