How does one handle the problem of rotating 12-hour shifts? How do you stop him from going from a night shift directly into a 24-hour work period? If the rotation is to another shift then the objective is to go from one short week to another short week. The following schedule shows the solution:

		M	Tu	W	Th	F	Sa	Su
Group 1	Week							
	1	x	D	D	x	x	D	D
	2	D	x	x	D	D	x	x

### Shift Transitioning

The illustration above illustrates how shift rotations are used in the example.

- Groups One and Three transition between shifts during the three-day off duty period that runs from Saturday through Monday
- Groups Two and Four transition between shifts during the two-day off duty period between Monday and Thursday.

A hypothetical schedule for the illustration on the previous page could like the one shown below.

Brunner, 2010-01-07 The introductory chapter consists of four sections In Sect 1 1 we reveal the current situation in hospitals that is faced by the management We address the general issue of personnel scheduling in the service industry in Sect 1 2 Then we motivate our research by considering physicians as the scheduling object In particular we show the complex nature of physician scheduling in a hospital environment The focus of the research is presented in Sect 1 3 Finally we conclude the chapter by illustrating the outline of the thesis 1 1 General Economic Situation in Hospitals The mounting pressure in the health care industry to reduce costs is forcing hospitals and related facilities to take a closer look at their staffing policies see 1 1 1 A primary difficulty in reducing personnel costs the major component of the budget is the variability in demand and the need to assign staff to fixed shifts Furthermore government run facilities especially those in the European Union are seeing their budgets cut in terms of real dollars despite an aging and more acutely ill patient population e g see 96 It has been reported that up to a third of the hospitals in Germany plan a reduction in staff see 91 The scheduling process is further complicated by the generally recognized

importance of taking individual preferences into account. More attractive schedules promote job satisfaction, increase productivity and reduce turnover of staff. However, without improved scheduling procedures that better match supply to demand, the level of care that they now provide will soon become unsustainable. 1
