Complexity and Simplicity in Science Education David Geelan, Kim Nichols, Christine V. McDonald, 2022-01-25 This edited volume brings together a broad range of international science education studies focusing on the interplay of teaching and learning science. It recognizes the complexity present in today's education associated with major science-related issues faced by society such as climate change, diseases, and pandemics, global conflicts over energy, food, and water. The studies discussed in this volume are focused on presenting different opportunities to teach these convoluted matters in order to find simplicity within the complexity and make it accessible to learners. They bring together the challenges of preparing the students of today to become scientifically informed citizens of tomorrow. *Emerging Technologies for Education* Ting-Ting Wu, Rosella Gennari, Yueh-Min Huang, Haoran Xie, Yiwei Cao, 2017-02-17 This book constitutes the thoroughly refereed post-workshop proceedings of the First International Symposium SETE 2016 held in conjunction with ICWL 2016 Rome, Italy, in October 2016. inflammatory mediators which could promote cancer cell survival proliferation and invasion On the other hand tumours are mutated self tissue cells to which the host immune system is largely tolerized otherwise Although the mutations may give rise to the expression of tumour specific antigens TSA or tumour associated antigens TAA most of these TSAs TAAs are found to be poor immunogens The ongoing inflammatory conditions may therefore reflect a desperate attempt of the host immune system to mount anti tumour responses though ineffectively being a consequence of the continuous yet largely futile triggering by those poorly immunogenic TSAs TAAs Furthermore during autoimmune or overtly persistent immunological responses many regulatory mechanisms are triggered in the host in attempts to limit the ongoing harmful inflammatory reactions Such a negative feedback regulation is known to be crucial in preventing normal individuals from immune mediated diseases As a result of the negative feedback loop however an excessive production of anti inflammatory or immunosuppressive molecules followed by the exhaustion of the immune effector cells may instead lower the ability of the host immune system to mount specific anti tumor responses allowing the escape of tumour or mutated cells from immunosurveillance This may also help to explain why the most effective way to enhance host immunity against cancer is by targeting the negative arm of immune regulation In this Frontiers Research Topic we aim to gather current views from experts in these inherent overlapping fields of oncology autoimmunity and tumour immunology and to make them available to our potential readership who may be particularly interested in this cutting edge area By understanding how the immune system is normally regulated why dysregulation of which may cause the immunological oncological related diseases we also encourage further discussions as to how the so called self reactivity autoimmune responses can be alternatively switched on and redirected immunologically or molecularly for effective cancer treatment
