dispersed computing resources has been gaining traction in a number of application areas during the past few years. By interconnecting many heterogeneous though usually virtualized computing resources, virtual computer centers or supercomputers can be created providing a seamless supply of computing resources. Grid computing provides benefits not only for scientific computing e.g. SETI@home which interconnects one million computers across 226 countries with a total processing power of 711 TFLOPS but also in a commercial environment. It is projected that computing Grids can lower the total IT costs of businesses by 30%. The report *Grid Computing A Vertical Market Perspective 2005-2010* by The Insight Research Corporation estimates an increase of worldwide Grid spending from 714.9 million in 2005 to approximately 19.2 billion in 2010. One of the most prominent activities in academia is the EGEE project being funded with 30 MEuro by the European Commission. EGEE brings together researchers from over 27 countries with the common aim of developing a service Grid infrastructure which is suited for scientific computing with very high demand for processing power.
