$$\sin(u) \sin(v) = \frac{1}{2} [\cos(u - v) - \cos(u + v)]$$

$$\cos(u) \cos(v) = \frac{1}{2} [\cos(u - v) + \cos(u + v)]$$

$$\sin(u) \cos(v) = \frac{1}{2} [\sin(u + v) + \sin(u - v)]$$

Thinking with Mathematical Models, 2002 **Recurrence Relations** Mick Bromilow, 1982 **Mathematical Models in the Social Sciences** John G. Kemeny, James Laurie Snell, 1962 **Modeling Love Dynamics** Sergio Rinaldi, Fabio Della Rossa, Fabio Dercole, Alessandra Gragnani, Pietro Landi, 2015-10-22 This book shows for the very first time how love stories a vital issue in our lives can be tentatively described with classical mathematics Focus is on the derivation and analysis of reliable models that allow one to formally describe the expected evolution of love affairs from the initial state of indifference to the final romantic regime The models are in full agreement with the basic philosophical principles of love psychology Eight chapters are theoretically oriented and discuss the romantic relationships between important classes of individuals identified by particular psychological traits The remaining chapters are devoted to case studies described in classical poems or in worldwide famous films **Mathematical Models** Arnold Emch, 1920 Mathematical Models for Social Psychology Erling B. Andersen, 1977 **Linear Models in the Mathematics of Uncertainty** Carol Jones, Mark J Wierman, Terry D Clark, Alex Pham, Michael A. Redmond, 2013-02-01 The purpose of this book is to present new mathematical techniques for modeling global issues These mathematical techniques are used to determine linear equations between a dependent variable and one or more independent variables in cases where standard techniques such as linear regression are not suitable In this book we examine cases where the number of data points is small effects of nuclear warfare where the experiment is not repeatable the breakup of the former Soviet Union and where the data is derived from expert opinion how conservative is a political party In all these cases the data is difficult to measure and an assumption of randomness and or statistical validity is questionable We apply our methods to real world issues in international relations such as nuclear deterrence smart power and cooperative threat reduction We next apply our methods to issues in comparative politics such as successful democratization quality of life economic freedom political stability and failed states Finally issues involving deaf and hard of hearing children are explored Mathematical Models Arnold Emch, 1921 Mathematical Modeling of Social Relationships Urszula Strawinska-Zanko, Larry S. Liebovitch, 2018-06-07 This edited volume presents examples of social science research projects that employ new methods of quantitative analysis and mathematical modeling of social processes This book presents the fascinating areas of empirical and theoretical investigations that use formal mathematics in a way that is accessible for individuals lacking extensive expertise but still desiring to expand their scope of research methodology and add to their data analysis toolbox Mathematical Modeling of Social Relationships professes how mathematical modeling can help us understand the fundamental compelling and yet sometimes complicated concepts that arise in the social sciences This volume will appeal to upper level students and researchers in a broad area of fields within the social sciences as well as the disciplines of social psychology complex systems and applied mathematics *Mathematical Models in the Social Sciences* John G Kemeny, J Laurie (James Laurie) 1925 Snell, 2021-09-09 This work has been selected by scholars as being

Thinking with Mathematical Models ,2009 **Pi: A Source Book** Jonathan M. Borwein,2013-06-29 Our intention in this collection is to provide largely through original writings an extended account of pi from the dawn of mathematical time to the present The story of pi reflects the most seminal the most serious and sometimes the most whimsical aspects of mathematics A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally with the subject It has been a part of human culture and the educated imagination for more than twenty five hundred years The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry analysis and special functions numerical analysis algebra and number theory It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development Why a Source Book Few books serve wider potential audiences than does a source book To our knowledge there is at present no easy access to the bulk of the material we have collected Mathematical Modelling Open University. Mathematics Foundation Course Team,1986 **Mathematical Models** Arnold Emch,1925

Mathematical Models and Methods ,1983 **Pi and the AGM** Jonathan M. Borwein,Peter B. Borwein,1987-01-19 This book presents new research revealing the interplay between classical analysis and modern computation and complexity theory Two intimately interwoven threads run through the text the arithmetic geometric mean AGM iteration of Gauss Lagrange and Legendre and the calculation of pi **Mathematical Modelling** Open University.
