The Promise and Practice of University Teacher Education Alexandra C. Gunn,Mary F. Hill,David A. G. Berg,Mavis Haigh,2020-10-01 Centering on the theme of university based teacher education at a time of system change and its connections with broader global political issues this book investigates the changing nature of initial teacher education ITE as it amalgamated into universities in the New Zealand context The New Zealand government like many across the world is seeking improvement in education system performance with a particular interest in meeting the needs of those traditionally disadvantaged through education As a result over the last 20 years most ITE has been relocated into universities and teacher qualifications have changed Not immune to international discourses about the criticality of the teacher workforce to system performance Aotearoa New Zealand provides a bounded yet connected case of ITE development and reform The authors draw from a study of teacher education practice in Aotearoa New Zealand and also look at recent research carried out in other jurisdictions to consider

how ITE and the academic category of teacher educator is constructed maintained and practiced within the institution of the university They highlight the promise of university based ITE provision noting areas for development and provide an opportunity to better understand how student teachers within ITE respond to and engage with teacher educators work in the service of their own learning Pop-Up Geometry Joseph O'Rourke,2022-03-24 Anyone browsing at the stationery store will see an incredible array of pop up cards available for any occasion The workings of pop up cards and pop up books can be remarkably intricate Behind such designs lies beautiful geometry involving the intersection of circles cones and spheres the movements of linkages and other constructions The geometry can be modelled by algebraic equations whose solutions explain the dynamics For example several pop up motions rely on the intersection of three spheres a computation made every second for GPS location Connecting the motions of the card structures with the algebra and geometry reveals abstract mathematics performing tangible calculations Beginning with the nephroid in the 19th century the mathematics of pop up design is now at the frontiers of rigid origami and algorithmic computational complexity All topics are accessible to those familiar with high school mathematics no calculus required Explanations are supplemented by 140 figures and 20 animations
