theory ethics pedagogy and representation Rendell's foreword and postscript provide context for these themes and suggest a way forward in today's challenging changing times

Architecture and Videogames Vincent Hui, Ryan Scavnick, Tatiana Estrina, 2025-02-04 This book explores and affirms the emergent symbiosis between videogames and architecture including insights from a diverse range of disciplines With contributions from authorities in both architecture and videogame industries it examines how videogames as a medium have enlightened the public about the built environments of the past offered heightened awareness of our current urban context and presented inspiration for the future directions of architecture A relatively nascent medium videogames have rapidly transitioned from cultural novelty to architectural prophet over the past 50 years That videogames serve as an interactive proxy for the real world is merely a gateway into just how pervasive and potent the medium is in architectural praxis If architecture is a synthesis of cultural value and videogames are a dominant cultural medium of today how will they influence the architecture of tomorrow The book is split into seven sections Cultural Artifacts Historic Reproduction Production Technologies Design Pedagogy Proxies and Representation Bridging Worlds and Projected Futures

Architectural Drawings as Investigating Devices Marianna Charitonidou, 2023-07-10 Architectural Drawings as Investigating Devices explores how the changing modes of representation in architecture and urbanism relate to the transformation of how the addressees of architecture and urbanism are conceived The book diagnoses the dominant epistemological debates in architecture and urbanism during the 20th and 21st centuries It traces their transformations paying special attention to Le Corbusier and Ludwig Mies van der Rohe's preference for perspective representation to the diagrams of Team 10 architects to the critiques of functionalism and the upgrade of the artefactual value of architectural drawings in Aldo Rossi John Hejduk Peter Eisenman and Oswald Mathias Ungers and finally to the reinvention of architectural programme through the event in Bernard Tschumi and the Office for Metropolitan Architecture OMA Particular emphasis is placed on the spirit of truth and clarity in modernist architecture the relationship between the individual and the

community in post war era architecture the decodification of design process as syntactic analogy and the paradigm of autonomy in the 1970s and 1980s architecture the concern about the dynamic character of urban conditions and the potentialities hidden in architectural programme in the post autonomy era This book is based on extensive archival research in Canada the USA and Europe and will be of interest to architects artists researchers and students in architecture architectural history theory cultural theory philosophy and aesthetics

Critical Readings Ruth Verde Zein,2020-09-01 The fifth book of the collection *Latin America Thoughts* presents a collection of Ruth Verde Zein s articles on architectural theory history and critic arranged around three themes Teaching and research case studies and panoramas Essays that share the belief that architectural design process is both creation of the new and connection with the relevant tradition and that being an eminently practical activity its completion and renewal only occurs when it relates to conceptual issues

RIBA Journal ,2008 *Architectural Possibilities in the Work of Eisenman* Michael Jasper,2022-11-11 This book examines the central decades of Peter Eisenman s work through a formal and thematic analysis of key architectural projects and writings revealing underlying characteristics and arguing for their productive continuity and transformative role The book explores Eisenman s approach to architectural form generation and thinking It does this through a thematic and formal analysis of projects and writings from the mid 1970s to the mid 1990s Following an introductory chapter addressing the theme of potentialities the book is organised in two parts The first part focuses on key period writings of Eisenman framing the close reading around a practice of resistance the architect s approach to history as analysis and the transformative conceptualisation of time In the second part the book undertakes an analysis of select projects from the 1980s and 1990s

Three formal preoccupations and conceptual orientations ground manipulations figuration and spatial events organise this part of the book Previously unpublished material from the Peter Eisenman fonds Canadian Centre for Architecture Montr al provides primary source material A concluding chapter addresses Eisenman s teaching its relation to his larger project and possible legacies for educators practitioners scholars and theorists Kafka's Architectures Ayad B. Rahmani, 2015-01-02 Adopting Kafka as a lens to examine modern concepts in architecture this book pries open new interpretations in Kafka scholarship Each of eight chapters takes up an architectural element with which to explore meanings central to both literature and architecture Stairs function as vertical access but in Kafka s hands become an instrument of science testing the merit of natural selection Kafka s doors open and close less to allow passage than to reconcile one psychological interior with the next Notions of plumbing and hygiene begin to acquire new meaning The architecture of Mies van der Rohe begins to make more sense especially his tabula rasa approach to design signifying less a harsh disdain for site and more a response to a reality in which the ceremony of the stairs had died and was replaced by the pervasive flatness of the modern floor

Architecture and Spectacle: A Critique Gevork Hartoonian, 2016-12-05 Focusing on six leading contemporary architects Peter Eisenman Frank Gehry Bernard Tschumi Zaha Hadid Rem Koolhaas and Steven Holl this book puts forward a unique and insightful analysis of neo avant garde architecture It discusses the spectacle and excess which permeates contemporary architecture in reference to the present aesthetic tendency for image making but does so by applying the tectonic of theatricality discussed by the 19th century German architect Gottfried Semper In doing so it breaks new ground by opening up a dialogue between the study of the past and the design of the present The work of each discussed architect is seen as addressing a historiographical problem To this end and this is the second important aspect of this book the chosen buildings are discussed in terms of the thematic of the culture of building the tectonic of column and wall for example rather the formal and this through a discussion that is informed by the latest available theories Having set the aesthetic implication of the processes of the digitalization of architecture the book s conclusion highlights strategies by which architecture might postpone the full consequences of digitalization and thus the becoming of architecture as ornament on its own right

Theories and Practices of Architectural Representation Mike Christenson, 2019-03-25 Theories and Practices of Architectural Representation focuses on the study of architectural knowledge approached through the lens of representation the making of things about buildings Architectural knowledge systems continue to shift away from traditional means such as books and photographs into modes dominated by digital technologies This shift parallels earlier ones developed by craftspeople into the knowledge of painters and writers or shifts from manually produced knowledge into the mode of photography and film These historical shifts caused profound disruptions to established patterns and in general the shift currently underway is no different This book considers essential questions including How does architecture become known How is knowledge about architecture produced structured disseminated and consumed How in particular do historical

patterns of knowledge production persist within contemporary culture and society How are these patterns affected by changes in technology and how does technology create new opportunities These questions are examined through five chapters dealing with exemplary buildings and representational methods selected from worldwide locations including the United States Japan and Italy Theories and Practices of Architectural Representation proposes that historical theories and practices of architectural representation remain distinct robust and uniquely viable within the context of rapidly changing technologies It is an essential read for students of architectural theory of representation
