Ocular Anatomy, Embryology, and Teratology Frederick A. Jakobiec,1982

Fundamental Changes in Cellular Biology in the 20th Century Charles Galperin,Scott F. Gilbert,Brigitte Hoppe,1999 This volume presents a collection of selected papers worked out for the XXth International Congress of History of Science held in July 1997 in Liege The first part analyzes interrelations between the exact sciences chemistry and physics on the one hand and life sciences on the other hand It is well known that in many fields of biological sciences mainly in those working with experimental methods chemical and physical knowledge was integrated but the historic development of that interrelation is not yet known and cannot be explained enough in all details until the

present day By searching for the events in the past historians of science find out that introducing physical and chemical methods and knowledge into life sciences was not a simple but very complex historical process The second part was constructed during the centenary of E B Wilson s pioneering book *The Cell in Development and Inheritance* 1896 with an eye on this tradition of biological research Wilson attempted to integrate cytology embryology and the chromosome theory of inheritance into a common cellular framework It was only in the late 1970s that the synthesis now called cell biology developmental biology and developmental genetics came into existence The work carried out in Zurich under E Hadorn s supervision was brought to light Concepts and paths of research were defined for example homeosis physiological genetics body plans allometry homologies of process evolution as bricolage and finally a critical essay on different perspectives on development

General Principles and Etiology James Wilson, 2013-06-29 In less than 40 years teratology has grown from a little known discipline concerned with studies on the effects of a few physical and chemical stresses on developing fish amphibians and birds to a discipline embracing a vast accumulation of literature on experimental studies in many animal forms and the results of intensive scrutiny of human development under varied conditions as well Emphasis has shifted from preoccupation with descriptions of anatomical defects to concern about subtle and interacting causative factors to searches for the early reactions to these at the cellular and subcellular levels and to identification of abnormality in the chemical the functional and the ultrastructural realms These changes in orientation have quite naturally made necessary the recruitment of concepts methods and expertise from other disciplines Hence the foundations of teratology which once were largely morphological have extended into genetics biochemistry molecular biology reproductive physiology epidemiology and several aspects of veterinary and clinical medicine It is not surprising that a student or new investigator approaching the field of teratology may feel some dismay when confronted with the confusing array of cross disciplinary concepts and principles it encompasses today One of the aims of this work is to introduce what the editors believe is a logical thread of continuity into a field that may be regarded by some as a welter of disordered information

Bibliography of the History of Medicine , Cumulated Index Medicus, 1975 *Teratology*, 1968 Publishes original reports of studies in all areas of abnormal development and related fields It also welcomes reviews of topics of current significance and letters discussing papers that have appeared in *Teratology* or that deal with controversial scientific matters of interest to its readers

General Principles and Etiology James Graves Wilson, F. Clarke Fraser, 1977 In less than 40 years teratology has grown from a little known discipline concerned with studies on the effects of a few physical and chemical stresses on developing fish amphibians and birds to a discipline embracing a vast accumulation of literature on experimental studies in many animal forms and the results of intensive scrutiny of human development under varied conditions as well Emphasis has shifted from preoccupation with descriptions of anatomical defects to concern about subtle and interacting causative factors to searches for the early reactions to these at the cellular and subcellular levels and to identification of abnormality in the chemical the functional and

the ultrastructural realms These changes in orientation have quite naturally made necessary the recruitment of concepts methods and expertise from other disciplines Hence the foundations of teratology which once were largely morphological have extended into genetics biochemistry molecular biology reproductive physiology epidemiology and several aspects of veterinary and clinical medicine It is not surprising that a student or new investigator approaching the field of teratology may feel some dismay when confronted with the confusing array of cross disciplinary concepts and principles it encompasses today One of the aims of this work is to introduce what the editors believe is a logical thread of continuity into a field that may be regarded by some as a welter of disordered information

Environmental Health, 2019-08-22 Encyclopedia of Environmental Health Second Edition Six Volume Set presents the newest release in this fundamental reference that updates and broadens the umbrella of environmental health especially social and environmental health for its readers There is ongoing revolution in governance policies and intervention strategies aimed at evolving changes in health disparities disease burden trans boundary transport and health hazards This new edition reflects these realities mapping new directions in the field that include how to minimize threats and develop new scientific paradigms that address emerging local national and global environmental concerns Represents a one stop resource for scientifically reliable information on environmental health Fills a critical gap with information on one of the most rapidly growing scientific fields of our time Provides comparative approaches to environmental health practice and research in different countries and regions of the world Covers issues behind specific questions and describes the best available scientific methods for environmental risk assessment Rural Society in France Robert Forster, Orest A. Ranum, 1977 For

this volume from *Annales* we have selected not only those articles that treat the impact of the events of a decade or the secular trends of a millennium on the agrarian structure of France but also those that describe the peculiar combination of physical surroundings traditions habits and tone that give the village its special character and durability Hence three of the eight selections treat specific villages The essays are qualitative despite their precision about acreages and occupations interdisciplinary relying heavily upon cultural anthropology and folklore and above all subtle in performing the double role of describing in depth the activities and values of a restricted number of human beings and of evoking situations that reflect a timeless human dimension the durable **Wonders, Marvels, and Monsters in Early Modern Culture** Peter G.

Platt, 1999 The marvelous follows us always or so the Italian philosopher Francesco Patrizi asserted in 1587 The essays in this book collectively make the case that this assertion could be an epigraph for the Renaissance For Wonder was a concept absolutely central to the early modern period Encompassing both inquiry and astonishment wonder indeed followed the Renaissance everywhere into redefinitions of the mind the body art literature the known world Often called the age of

discovery the Renaissance should also be seen as the age of the marvelous However defining just what la maraviglia would have meant for Patrizi and his age is no small task This volume then seeks to explore early modern views of wonder and the marvelous by revealing the complexity of la maraviglia in the Renaissance BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved
