Abstract: Attendance management is important to every single organization; it can decide whether or not an organization such as educational institutions, public or private sectors will be successful in the future. Organizations will have to keep a track of people within the organization such as employees and students to maximize their performance. Managing student attendance during lecture periods has become a difficult challenge. The ability to compute the attendance percentage becomes a major task as manual computation produces errors, and wastes a lot of time. For the stated reason, an efficient Web-based application for attendance management system is designed to track student's activity in the class. This application takes attendance electronically and the records of the attendance are storing in a database. The system design using the Model, View, and Controller (MVC) architecture, and implemented using the power of Laravel Framework, JavaScript is adding to the application to improve the use of the system. MySQL used for the Application Database. The system designed in a way that can differentiate the hours of theoretical and practical lessons since the rate of them is different for calculating the percentages of the students' absence. Insertions, deletions, and changes of data in the system can do straightforward via the designed GUI without interacting with the tables. Different presentation of information is obtainable from the system. The test case of the system exposed that the system is working enormously and is ready to use to manage to attend students for any department of the University.

Keywords: Attendance Management Systems, Web Application, Absence Management System.

INTRODUCTION

Due to student's interest in classrooms, and whose is the largest union in the study environment of university or institution, so recording absence at a department having a large number of students in a classroom is a difficult task and time-consuming. Moreover, the process takes much time, and many efforts are spent by the staff of the department to complete the attendance rates for each student. So in many institutions and academic organizations, attendance is a very important criterion which is used for various purposes. These purposes include record keeping, assessment of students, and promotion of optimal and consistent attendance in class. As long as in many developing countries, a minimum percentage of class attendance is required in most institutions and this policy has not been adhered to, because of the various challenges the present method of taking attendance presents. The process of recording attendances for students was in the form of hardcopy papers and the system was manually done. Besides wasting time and taking efforts for preparing sheets and documents, other disadvantages may be visible to the traditional one due to loss or damage to the sheets-sheet could be stolen.

The developed system considers as an alternative to the traditional one, it is easy, fast and

reliable than the traditional one, especially after the development of information technology and its usage by educational institutions. Therefore, the design of student attendance system has a significant reality meaning.

The system is a Web-based application developed for daily student attendance in departments within the university. It facilitates access to the attendance of a particular student in a particular class. This system will also help in generating reports and evaluating the attendance eligibility of a student. The system is not only improving the work efficiency, students' study and development, but also can save human and material resources.

Recasting a Craft Robert A. Mullen, 2005. In the nineteenth and early twentieth centuries, type for newspapers and books was set one letter at a time, and the manufacturers of the metal type used in the printing trade were called typesetters. This prominent yet rarely documented industry was essential to the development of modern American publishing and was particularly prevalent in St. Louis. In Recasting a Craft: St. Louis Typesetters Respond to Industrialization, Robert A. Mullen recognizes the city's significant contributions to typesetting and details how the craft fundamentally changed through mechanization, growth, and the creation of a large conglomerate. Like many trades of the nineteenth and early twentieth centuries, that were

eventually lost to industrialization the typefoundries of St Louis grew from small shops to factories with organized labor Mullen describes three distinct periods of the industry that emerged in St Louis s typefounding trade the early struggles in establishing the industry there the period of intense competition and creative enterprise and the proliferation of new companies that appealed to those customers who felt alienated by the monopolizing older companies Mullen discusses at length the technological social and demographic foundations of the immense growth of the trade in the nineteenth century identifying the changes in typographical design and the demand for it in the new era of advertising He also profiles the workers working conditions and labor issues such as the failed industry wide strike of 1903 that emerged as the craft of typefounding entered the industrial age More than two hundred type designs that originated with the St Louis firms are listed in an appendix with examples of each face The volume also contains a list of the catalogs of the St Louis typefoundries known to exist in the public and academic libraries of the United States
