

Use this worksheet to help you practice drawing diagrams for reflection, refraction and TIR

REFLECTION

In the diagram, show the path of the ray of light to show how the student sees an image in the silver surface of point B.

REFRACTION

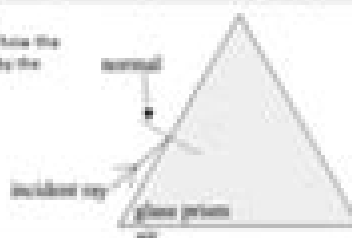

The diagram shows a ray of light through a glass block as shown in the diagram.

(a) Which letter represents the angle of refraction?

The diagram shows a ray of red light entering a glass prism.

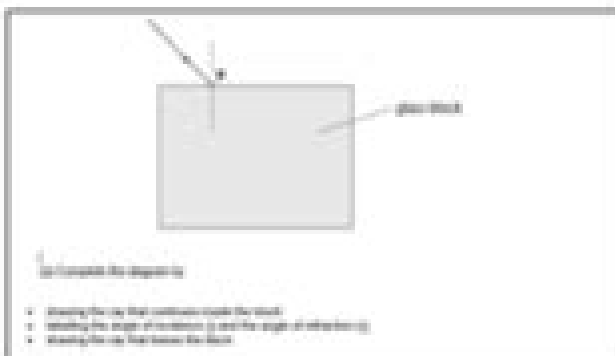

Complete the ray diagram for white light the light is refracted by the prism.

The diagram shows white light reflecting at an air-glass boundary and separating into colours.

The refractive index of glass for red light is 1.514. Calculate the angle of refraction for red light.

(a) Complete the diagram by

- drawing the ray that continues inside the block
- drawing the ray of refraction (i) and the angle of refraction (j)
- drawing the ray that leaves the block

TIR

(a) Complete the diagram to show the ray of light undergoing total internal reflection.

Light enters a point along the normal AB and emerges along the normal CD as shown between B and C. There are two total internal reflections.

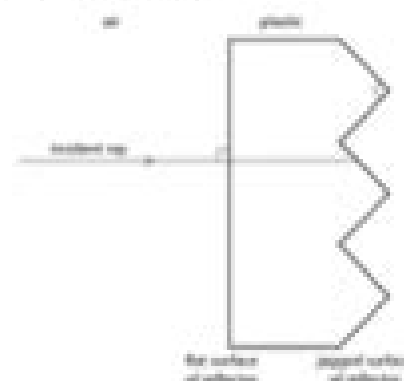

Complete the path of the light through the point

(b) (i) Show by calculation that the critical angle for a refractive index of 1.5 is about 42°

The diagram shows a ray of light hitting the boundary between the water and air. It shows the refractive index of the water.

A ray of light is incident on the flat surface of the reflector.

(a) The critical angle for the glass of the reflector is about 42°

Complete the incident ray on the diagram to show the path of the ray until it emerges from the glass.
