THERMAL POWER PLANT AND CO-GENERATION PLANNING -Volume II ,2010-10-05 These volumes are a component of Encyclopedia of Water Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias These volumes discuss on Large scale power production which requires the use of heat in a thermodynamic cycle to produce mechanical work which in turn can generate electrical energy Substantial quantities of fuel are hence required to sustain the production of heat Fuel may be combustible as in the case of fossil fuels such as coal and oil or fissionable as in the case of nuclear fuels such as uranium All fuels produce waste products which must be discharged dumped or stored Such products range from innocuous water vapor to hazardous nuclear waste These volumes are aimed at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy and Decision Makers Renewable Energy Sources and Climate Change Mitigation Ottmar Edenhofer,Ramón Pichs-Madruga,Youba Sokona,Kristin Seyboth,Susanne Kadner,Timm Zwickel,Patrick Eickemeier,Gerrit Hansen,Steffen Schlömer,Christoph von Stechow,Patrick Matschoss,2011-11-21 This Intergovernmental Panel on Climate Change Special Report IPCC SRREN assesses the potential role of renewable energy in the mitigation of climate change It covers the six most important renewable energy sources bioenergy solar geothermal hydropower ocean and wind energy as well as their integration into present and future energy systems It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non technical obstacles to their application and diffusion SRREN brings a broad spectrum of technology specific experts together with scientists studying energy systems as a whole Prepared following strict IPCC procedures it presents an impartial assessment of the current state of knowledge it is policy relevant but not policy prescriptive SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers the private sector and academic researchers **The World in 2050** Harinder S. Kohli,Ramgopal Agarwala,2017-01-05 The world economy has over the past half century become increasingly intertwined and countries mutually dependent The convergence of emerging market economies EMEs with the advanced richer ones has led to dramatic transformation where the former have sustained growth rates far higher than the latter But more recently

given the global economic turbulence since 2007 questions have arisen as to whether the era of rapid convergence is over and whether more EMEs are destined to get mired in the middle income trap This book takes a long term perspective of the economic and social outlook of the world to 2050 focusing on cross cutting intergenerational issues that often get overshadowed by the short term crises and political preoccupations of the day It argues that for a prosperous economic order convergence of large developing economies led by East Asia and India with the developed world is crucial given the former's share in the global GDP Addressing the various aspects of emerging markets such as international trade urbanization food security climate change and governance the book brings out the role of the global economic community toward increasing living standards throughout the world while pressuring our fragile planet A joint effort of a multidisciplinary multicultural team of 26 authors who were born in twelve different countries on five continents this book is an analytically rigorous exploration of the future of the global economy and its societies
