Holmdahl,2019-07-10 During the last two decades our view of the role of reactive oxygen species ROS in inflammatory processes has changed dramatically ROS that are constantly produced at lower levels by living cells metabolizing oxygen contribute to normal cellular function and tissue homeostasis ROS are produced at higher levels in inflammation and regulate the inflammatory response in specific ways The role of ROS in inflammation is complex and primarily determined by their relative amount chemical properties reactivity subcellular localization and molecular environment specificity for their biological targets and availability and mechanisms of antioxidant defense systems This eBook comprises twelve reviews and original articles that provide new findings on the role of ROS in the regulation of inflammatory processes highlight emerging topics in redox signaling describe new ROS detection techniques and discuss alternative therapeutic strategies to treat inflammatory disorders The editorial that precedes the published articles briefly summarizes the main findings of each research paper We hope that this collection of research articles contribute to a better understanding of ROS in inflammation

16th Congress of the International Society for Forensic Haemogenetics (Internationale Gesellschaft für forensische Hämo-genetik e.V.), Santiago de Compostela, 12-16 September 1995 Angel Carracedo, Bernd Brinkmann, Walter Bär, 2012-12-06

The 6th volume of Advances in Forensic Haemogenetics comprises the scientific contributions to the 16th Congress of the International Society for Forensic Haemogenetics ISFH held on Sept 12 16 1995 at Santiago de Compostela Spain The numerous papers mainly deal with the applicability of DNA technology to forensic questions The invited speakers approached important topics such as variation of mitochondrial DNA in ancient and modern humans the STR approach to solve forensic questions the statistical analysis of STR data automation of DNA analysis long PCR and its applications national DNA databases and ethical and legal aspects of DNA analysis It has become obvious that PCR based polymorphic systems clearly dominate the scene of forensic DNA analysis worldwide It will however be necessary to make efforts to standardize the still increasing number of systems with regard to nomenclature to achieve a universal comparability of results Legal systems differ from country to country which has to be taken into account when reporting DNA results There is still controversy about the way DNA results are to be presented in court rooms We should make efforts to assess the value of DNA evidence by a common scientific statistical approach that is comprehensive enough to treat all possible hypotheses such as involved relatives different ethnics and or the not so rare situations with mixed stains
