

Samsung's Global Samsung Aptitude Test is famous for its difficulty. In one section there are 35 multiple-choice questions with two choices each (one of them is correct). Assume that the answers are given randomly. Use the normal distribution to approximate the binomial distribution to calculate the following:

- a) If an applicant gets 20 or more questions correct, he/she passes the section. What is the probability for this?
- b) What is the probability that an applicant gets 20-25 correct answers (both inclusive)?
