

understanding how to use that information in complex problem solving. It may be helpful to build on Charlie's visual spatial strengths by teaching him to put visual spatial information into words, so that he can think about it in multiple ways. For example, when putting together pieces of a puzzle, he can be taught to verbalize what he is doing, e.g., 'The top curve goes with the top curve' and 'The yellow line goes with the yellow line.' When identifying the missing pieces of visual patterns, he could be taught to verbalize what he sees, such as 'Big circle, little circle, big circle, Little circle comes next.' These simple activities may help him use his visual spatial skills when completing more complex tasks.

### **Recommendations for Fluid Reasoning Skills**

Charlie exhibited Average performance on the FRI. While this score is within normal limits for his age, it was an area of relative weakness. Children who have relative difficulty with fluid reasoning tasks may have difficulty solving problems, applying logical reasoning skills, and understanding complicated concepts. Charlie may benefit from practicing skills in this area. He may benefit from structure and practice when approaching tasks that are challenging to him. With regard to specific fluid reasoning interventions, he can be asked to identify patterns or to look at a series and identify what comes next. Additionally, he can be given a group of objects and asked to think of multiple ways to group those objects. Adults can ask him to explain each of his groupings. Performing age-appropriate science experiments may be helpful in building logical thinking skills. For example, adults can help him form a hypothesis and then perform a simple experiment, using measurement techniques to determine whether or not his hypothesis was correct. Asking questions about stories can also build fluid reasoning skills. For example, when reading a book or watching a movie, Charlie can be asked to identify the main idea of the story. Adults in his life can ask him open-ended questions that utilize his fluid reasoning skills. They can ask him questions such as, 'What do you think would happen if...' and help him to think logically about his responses. Reinforcing his responses with positive feedback may encourage him to continue engaging his fluid reasoning skills.

### **Recommendations for Working Memory Skills**

Charlie's working memory scores fell in the Average range. Working memory skills are an area of weakness compared to other areas of cognitive functioning, which may make it difficult for him to concentrate and attending to information that is presented to him. This may impact his school performance in the future. Relatively weak working memory skills may also be contributing to his reading difficulties, and can lead to reading comprehension problems as text becomes more complex in future grades. Several recommendations are made based upon this score. Because WPPSI-IV only measures visual working memory, further testing may be useful in assessing Charlie's auditory working memory. A complete understanding of his current working memory functioning may be helpful in informing intervention. Computerized interventions may be helpful in building his capacity to exert mental control, ignore distraction, and manipulate information in his mind. Other strategies that may be useful in increasing working memory include teaching Charlie to chunk information and connect new information to concepts that he already knows. As part of a comprehensive intervention plan, literacy goals such as learning letters and identifying the main idea of stories that are read aloud can be identified. It is important to reinforce Charlie's progress during these interventions. Goals should be small and measurable, and should steadily increase in complexity as his skills grow stronger.
