Evolutionary Learning: Advances in Theories and Algorithms Zhi-Hua Zhou,Yang Yu,Chao Qian,2019-05-22 Many machine learning tasks involve solving complex optimization problems such as working on non differentiable non continuous and non unique objective functions in some cases it can prove difficult to even define an explicit objective function Evolutionary learning applies evolutionary algorithms to address optimization problems in machine learning and has yielded encouraging outcomes in many applications However due to the heuristic nature of evolutionary optimization most outcomes to date have been empirical and lack theoretical support This shortcoming has kept evolutionary learning from being well received in the machine learning community which favors solid theoretical approaches Recently there have been considerable efforts to address this issue This book presents a range of those efforts divided into four parts Part I briefly introduces readers to evolutionary learning and provides some preliminaries while Part II presents general theoretical tools for the analysis of running time and approximation performance in evolutionary algorithms Based on these general tools Part III presents a number of theoretical findings on major factors in evolutionary optimization such as recombination representation inaccurate fitness evaluation and population In closing Part IV addresses the development of evolutionary learning algorithms with provable theoretical guarantees for several representative tasks in which evolutionary learning offers excellent performance
