Forgacs,2012-12-06 The topics chosen for discussion represent the most common problems referred by family doctors to chest clinics It was taken for granted that the reader will be familiar with the symptoms signs and natural history of respiratory diseases so that the stress is on differential diagnosis and treatment Tuberculosis once occupied nearly all the time of chest physicians At present weeks go by without a single case presenting itself There has been no comparable improvement in cancer of the lung which remains one of the most intractable problems Asthma was seldom referred to outpatient clinics when the disease was regarded as more unpleasant than dangerous The hazards of severe attacks and the advantages of liaison with a hospital department are now widely recognized A similar change of attitude to the management of chronic bronchitis brought many new patients to the chest clinics in place of the vanishing tuberculous population Some uncommon pulmonary diseases are included allergic alveolitis because of the importance of early diagnosis and sarcoidosis in order to discourage unnecessary treatment The book is intended to be a practical guide and is not a critical review This might serve as an excuse for its didactic style and the exclusion of controversial subjects Some statements are repeated at more than one place in order to help readers who wish to consult individual chapters bearing on some current problem Source references are omitted and are replaced by a short list of books recommended for further reading **Neurocritical**

**Care Board Review** Asma Zakaria,Pouya Tahsili-Fahadan,2018-12-20 Updated and expanded second edition of the singular review source for neurocritical care boards this book contains multiple choice questions that cover the breadth of topics tested on the boards with answers and rationales for self study The book has been completely and thoroughly revised to reflect the requirements for initial certification or recertification in Neurocritical Care with the latest findings of the most recent clinical trials in vascular neurology neurocritical care and critical care medicine incorporated Organized to reflect the training curriculum and exam blueprint the second edition now contains 740 questions addressing both neuroscience critical care and general critical care core knowledge Detailed explanations are provided for each question along with references for

further study Case questions with angiograms EEG and monitoring waveforms CT perfusion scans and other images allow candidates to familiarize themselves with these tools that form a significant part of the exam This book is an excellent resource not only for board preparation but for topical review for residents and fellows from all disciplines of medicine rotating in the neurocritical care unit as it is easy to read concise and portable with case examples and imaging to further guide education Trainees taking the surgical or medicine critical care boards will also find it useful as it covers the neurocritical care component of their board curriculums Key Features Second edition of the first dedicated review book available for neurocritical care boards Over 90 entirely new questions added to ensure coverage of the full range of topics tested on boards and essential to training in neurocritical care Revised and updated questions answers and references to reflect current science and practice Comprehensive high yield review of both neurological and general critical care topics New chapter on critical care EEG and more image based case questions to augment learning

Respiratory Care: Cardiopulmonary Anatomy & Physiology Margaret V. Clark,2020-09-08 Respiratory Care Cardiopulmonary Anatomy and Physiology is a comprehensive highly illustrated text with a strong emphasis on

cardiovascular and pulmonary physiology acid base balance and blood gas interpretation      *Current Perspectives on the Functional Design of the Avian Respiratory System* John N. Maina, 2023-09-13 Birds have and continue to fascinate scientists and the general public While the avian respiratory system has unremittingly been investigated for nearly five centuries important aspects on its biology remain cryptic and controversial In this book resolving some of the contentious issues developmental structural and functional aspects of the avian lung air sac system are particularized it endeavors to answer following fundamental questions on the biology of birds how when and why did birds become what they are Flight is a unique form of locomotion It considerably shaped the form and the essence of birds as animals An exceptionally efficient respiratory system capacitated birds to procure the exceptionally large quantities of oxygen needed for powered active flight Among the extant air breathing vertebrates comprising 11 000 species birds are the most species rich numerically abundant and extensively distributed animal taxon After realizing volancy they easily overcame geographical obstacles and extensively dispersed into various ecological niches where they underwent remarkable adaptive radiation While the external morphology of birds is inconceivably uniform for such a considerably speciose taxon contingent on among other attributes lifestyle habitat and phylogenetic level of development have foremost determined the novelties that are displayed by diverse species of birds Here critical synthesizes of the most recent findings with the historical ones evolution and behavior and development structure and function of the exceptionally elaborate respiratory system of birds are detailed The prominence of modern birds as a taxon in the Animal Kingdom is underscored The book should appeal to researchers who are interested in evolutionary processes and how adaptive specializations correlate with biological physiognomies and exigencies comparative biologists who focus on how various animals have solved respiratory pressures people who study respiration in birds and other animals and ornithologists who love and enjoy birds for what they are profoundly interesting animals
