## THE RESPIRATORY SYSTEM

### FIRST VIDEO: THE RESPIRATORY SYSTEM (EducationWithVision)

Humans breathe in oxygen and breathe out carbon dioxide; a process known as respiration. The respiratory system includes the nose, throat, voice box, windpipe, and lungs. At the top of the respiratory system, the nostrils bring air into the nasal cavity where it's filtered, warmed and moistened.

The windpipe divides into two branches, called bronchi, and each one of these enters one of the two lungs of the body. Each branch resembles the limbs of a tree dividing into smaller, finer branches called bronchioles. These end in tiny air sacs called alveoli.

#### What are alveoli?

Tiny structures that enable fresh air to get to the air sacs, which are surrounded by tiny blood vessels, or capillaries. The oxygen passes through these air sacs and travels through the capillary walls into the bloodstream. At the same time, carbon dioxide transfers from the bloodstream into the air sacs where it gets breathed out of the body.

#### What are cilia?

Cilia are tiny hairs that protect the nasal passageways and filter out dust and other particles that enter the nose through the breathed air.

#### What is the trachea?

A 2-3cm tube that extends downwards from the bottom of the larynx for about 12cm, it is made strong by stiff rings of cartilage. It is lined with tiny hairs that sweep out foreign particles and fluids.

#### What is the pharynx?

The pharynx is where the two airways of the nose and mouth meet up. It carries both food and air.

#### What is the larynx? Where is it located?

The larynx is where our vocal cords are, and is located at the top of the trachea

Care in Canada is designed to help you review and master content from the core text and learn how to think critically in applying your knowledge. Chapters parallel those in the text and provide review, critical thinking, applications, engaging activities, and more, with an answer key at the back of the book. This comprehensive study guide also contains case studies to help you integrate information and develop the critical thinking, clinical reasoning, and clinical judgement skills required to pass your licensure examination and excel in clinical practice. Thinking Critically case-based activities require students to apply the concepts found in the chapters to solve problems, make clinical judgement decisions concerning care management, and provide responses to patient questions and concerns. Reviewing Key Concepts questions in various formats give students ample opportunities to assess their knowledge and comprehension of information covered in the text. Matching, fill in the blank, true/false, short answer, and multiple choice activities help students identify the core content of each chapter and test their understanding. Learning Key Terms, matching, and fill in the blank questions let students test their ability to define all key terms highlighted in the corresponding textbook chapter. Perforated pages allow you to use activities for graded assignments. Answer key at the end of the book includes answers to all questions.
