Base your answer to the next 3 questions on the diagram of nerve cells below and on your knowledge of biology.

1. In the space below, sketch a chemical molecule that might be released from nerve cell A and be recognized and bind to area 1 of nerve cell B.

2. Describe what would happen if a drug molecule shaped like ■ were introduced into this nerve pathway.

—Nothing, the shape would not be accepted by receptors on B.

3. Identify one substance, other than the secretions from nerve cells, used in cell communication.

— hormones — antigens — receptor molecules

Base your answer to the next 2 questions on the information below and on your knowledge of biology.

Cell communication involves a cell detecting and responding to signals from other cells. Receptor molecules play an important role in these reactions. Human cells have insulin receptors that are needed for the movement of glucose out of the blood.

4. State one way that the shape of the insulin receptor is related to its role in cell communication.

— The shape of the receptor molecule is specific for a specific molecule.

5. A typical human liver cell can have over 90,000 insulin receptors. If a genetic error occurred, resulting in each liver cell in a person having only 1,000 insulin receptors, what specific effect would this have on the liver cells?

— The liver would receive less insulin.
