

## Revision - Physical Chemistry - 3a) Energetics

Define the following reactions and give an example of each

Endothermic absorbs heat to the environment e.g. Boiling

Exothermic Takes in heat e.g. Melting ice

Explain what experiment you can do to determine how much energy is given out during neutralization

Put 100cm<sup>3</sup> in a polystyrene cup & measure temperature at the start & end using a thermometer

Draw a labelled energy level diagram to show an exothermic reaction.

1. Excess iron powder was added to 100.0 cm<sup>3</sup> of 0.200 mol dm<sup>-3</sup> copper(II) sulfate solution in a calorimeter. The reaction equation was as follows.  $\text{Fe (s)} + \text{CuSO}_4\text{(aq)} \rightarrow \text{FeSO}_4\text{(aq)} + \text{Cu (s)}$   
The maximum temperature rise was 7.5 °C. Determine the heat energy change of the reaction, in kJ.

$$Q = m \times c \times \Delta T$$

$$Q = 100\text{g} \times 4.18 \text{ J/g}^\circ\text{C} \times 7.5^\circ\text{C} = -3.13 \text{ kJ}$$

2. 1.023 g of propan-1-ol ( $M_r = 60.11 \text{ g mol}^{-1}$ ) was burned in a spirit burner and used to heat 200 g of water in a copper calorimeter. The temperature of the water rose by 30 °C. Calculate the heat energy change for the combustion of propan-1-ol using this data.

$$Q = 200\text{g} \times 4.18 \times 30^\circ\text{C} = -25080 \text{ J} \approx -25 \text{ kJ}$$

3. A chemist uses a Bunsen burner to heat some ethanol in a beaker. If the energy input is 2.5 kJ and the temperature change is 21 °C to 32 °C, find the mass of ethanol that was heated in kg.

$$m \Delta T = \frac{2500}{2400 \times 11} = 0.095 \text{ kg / 95g}$$

3. A spinning bicycle wheel needs to be brought to a stop by a rubber brake block. Assuming the wheel has 500 J of kinetic energy that is all absorbed by the brake and that the mass of the block is 25g, how much will the temperature of the block rise by in °C?

$$\Delta T = \frac{500}{0.025 \times 2000} = 10^\circ\text{C}$$

**Chemistry of Ozone in Water and Wastewater Treatment** Clemens von Sonntag,Urs von Gunten,2012-08-31 Even though ozone has been applied for a long time for disinfection and oxidation in water treatment there is lack of critical information related to transformation of organic compounds This has become more important in recent years because there is considerable concern about the formation of potentially harmful degradation products as well as oxidation products from the reaction with the matrix components In recent years a wealth of information on the products that are formed has accumulated and substantial progress in understanding mechanistic details of ozone reactions in aqueous solution has been made Based on the latter this may allow us to predict the products of as yet not studied systems and assist in evaluating toxic potentials in case certain classes are known to show such effects Keeping this in mind Chemistry of Ozone in Water and Wastewater Treatment From Basic Principles to Applications discusses mechanistic details of ozone reactions as much as they are known to date and applies them to the large body of studies on micropollutant degradation such as pharmaceuticals and endocrine disruptors that is already available Extensively quoting the literature and updating the available compilation of ozone rate constants gives the reader a text at hand on which his research can be based Moreover those that are responsible for planning or operation of ozonation steps in drinking water and wastewater treatment plants will find salient information in a compact form that otherwise is quite disperse A critical compilation of rate constants for the various classes of compounds is given in each chapter including all the recent publications This is a very useful source of information for researchers and practitioners who need kinetic information on emerging contaminants Furthermore each chapter contains a large selection of examples of reaction mechanisms for the transformation of micropollutants such as pharmaceuticals pesticides fuel additives solvents taste and odor compounds cyanotoxins Authors Prof Dr Clemens von Sonntag Max Planck Institut f r Bioanorganische Chemie M lheim an der Ruhr and Instrumentelle Analytische Chemie Universit t Duisburg Essen Essen Germany and Prof Dr Urs von Gunten Eawag Swiss Federal Institute of Aquatic Science and Technology D bendorf and Ecole Polytechnique Federal de Lausanne Lausanne Switzerland
