This book uses input output data from the World Input Output Database to track the intermediate goods and services used in national manufacturing industries. Specifically, it examines the extent that supply chains increasingly involve imports and the extent that this trend has changed for the U.S. and other countries. The U.S. data is compared to 39 other countries between 1995 and 2009, a 15-year period. The 40 countries represented approximately 88% of global manufacturing value added in 2009 according to United Nations data. In terms of 2009 imported supply chain value added used by a nation's manufacturing industry as a percent of all value added associated with that nation's manufacturing industry, the U.S. imported 10.8% of its supply chain, the 3rd lowest percentage, meaning that in relation to other countries, the U.S. imports a smaller proportion of its supply chain for manufacturing. Between 1995 and 2009, the percentage of imported supply chain value added increased for 32 of the 40 countries examined, and for the U.S. it increased by 1.96 percentage points. The average increase for the 32 countries was 4.67 percentage points, and the average change for all countries was an increase of 2.78 percentage points; thus, the U.S. percentage increase in supply chain imports is slightly below the average. China's value increased by 4.92 percentage points, while Japan's value increased by 4.59 percentage points. U.S. supply chain imports peaked in 2008 at 14.2% and ranked as the 6th lowest at that time. These figures confirm that foreign suppliers have replaced some domestic suppliers in the U.S.

*An Investment Perspective on Global Value Chains* Christine Zhenwei Qiang, Yan Liu, Victor Steenberg, 2021-06-25  
This report investigates the role of foreign direct investment (FDI) in helping developing countries participate in global value chains (GVCs). It combines the perspectives and strategies from three types of players: multinational corporations, domestic firms, and governments. It aims to provide practical guidance for developing countries to develop strategies that use FDI to strengthen GVC participation and upgrading. The report has six main chapters:  
1. FDI and GVCs: Assesses the trade-investment nexus and analyzes the effect of FDI in countries' GVC participation and upgrading at the country level.  
2. MNCs shape GVC development: Highlights MNCs' contribution to global economy and how their business strategies shape the evolution of GVCs. The chapter also compares MNCs' business strategies in terms of outsourcing and offshoring, risk mitigation, and increasing market power across GVC archetypes.  
3. Domestic firm perspectives on GVC participation: Looks at the various paths domestic firms can take to internationalize their production and trade. Investigates domestic firm characteristics that predict higher GVC participation and the effect of GVC participation on firm performance.  
4. Investment policy and promotion: What is in a government's toolbox? Summarizes the various policy instruments governments have at their disposal to help attract MNCs to their country and facilitate GVC participation of domestic firms.  
5. Integrating countries into GVCs: Draws on a range of case studies to illustrate how governments can develop coherent strategies and

policy packages to integrate their countries into GVCs 6 FDI and GVCs in the wake of COVID 19 Reflects the impact of COVID 19 on FDI and GVCs the response from multinationals and suppliers and the implications for GVC reconfiguration In addition there are seven case studies that offer more nuanced analysis on the GVC participation in selected countries and sectors Five qualitative case studies Five countries have been selected that managed to use FDI to stimulate GVC participation using a range of approaches By design these five countries also cover five different GVC archetypes These countries are 1 Kenya horticulture 2 Dominican Republic textiles 3 Mauritius tourism 4 Malaysia electronics 5 China software Two quantitative case studies Rwanda West Bengal India These use a combination of firm and transaction level datasets to study firm level dynamics that explain the role of multinational and domestic firms across GVCs

*The Cloud Revolution* Mark P. Mills, 2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what's really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it's going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history's biggest infrastructure which is itself based on the building blocks of next generation microprocessors and artificial intelligence We've seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar confluence one that was first visible in the 1920s a new information infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don't drive great long cycle booms It always takes convergent revolutions in technology's three core spheres information materials and machines Over history that's only happened a few times We have wrung much magic from the technologies that fueled the last long boom But the great convergence now underway will ignite the 2020s And this time unlike any previous historical epoch we have the Cloud amplifying everything The next long boom starts now

**The Routledge Companion to Global Value Chains** Renu Agarwal, Christopher Bajada, Roy Green, Katrina Skellern, 2021-09-30 This Companion provides a review of global value chains GVCs and the megatrends that are shaping them and will continue to reshape them in deep set trajectories of change over the next few decades Megatrends herald both challenges and opportunities With the growing interest among business leaders and researchers in GVCs this is a reference work which fills

a gap in current literature by focusing on the new features of GVCs including the shift of global purchasing power towards developing economies the significance of emerging technologies and data analytics the increasing tensions between globalisation and de globalisation and the role of micro multinationals start up entrepreneurs the public sector and middle markets in a fast changing global economy The early chapters are essentially intradisciplinary in character with the first seeking to explore some historical aspects of GVCs Subsequent chapters cover the theory and practice of operations and supply chain management emerging supply chain technologies and the impact of inter firm collaboration across sectors and economies The final chapters take a more interdisciplinary approach and examine topics at the interface of GVCs with the economy society culture and politics This comprehensive handbook provides a timely analysis of leading edge global megatrends and practices in one volume

Structural Transformation in South Africa Antonio Andreoni,Pamela Mondliwa,Simon Roberts,Fiona Tregenna,2021 Taking South Africa as an important case study of the challenges of structural

transformation Structural Transformation in South Africa offers a new micro meso level framework and evidence linking country specific and global dynamics of change with a focus on the current challenges and opportunities faced by middle income countries Detailed analyses of industry groupings and interests in South Africa reveal the complex set of interlocking country specific factors which have hampered structural transformation over several decades but also the emerging productive areas and opportunities for structural change The structural transformation trajectory of South Africa presents a unique country case given its industrial structure concentration and highly internationalized economy as well as the objective of black economic empowerment Structural Transformation in South Africa links these micro meso dynamics to global forces driving economic institutional and social change This include digital industrialization global value chain consolidation financialization environmental and other sustainability challenges which are reshaping structural transformation dynamics across middle income countries like South Africa While these new drivers of change are disrupting existing industries and interests in some areas in others they are reinforcing existing trends and configurations of power The book analyses the ways in which both the domestic and global drivers of structural transformation shape and in some cases are shaped by a country s political settlement and its evolution By focusing on the political economy of structural transformation the book disentangles the specific dynamics underlying the South African experience of the middle income country conundrum In so doing it brings to light the broader challenges faced by similar countries in achieving structural transformation via industrial policies

Industrial Clusters in International Value Chains Joanna Bohatkiewicz-Czaicka, Marta Gancarczyk, 2024-07-10. Clusters are considered crucial nodes in the ongoing transformation of international value chains (IVCs). Due to technological advancements and external shocks such as pandemic and political conflicts, value chains (VCs) have been spatially and functionally shortening, and clusters are well suited to address the resulting demand for more diversified and higher value adding activities in geographical proximity such as the European economic area. However, clusters differ in their positions and capability to advance in IVCs, which induces the research problem of the conditions for cluster upgrading (CU). This monograph aims to develop a theoretical framework for regional CU and empirically verify this framework based on ICT clusters in Europe. It advances the theory of upgrading by linking the VC governance and capability approaches, broadening the empirical evidence on the conditions of CU and providing policy recommendations. The unique value of the findings from research and practice results in the identification of the determinants for CU and conceptualizes them into new theoretical constructs of the sufficient Framework Conditions and the necessary and sufficient Public Private Knowledge Governance. Our empirical basis is European clusters in ICT, an industry being one of the Key Enabling Technologies (KETs) for innovation and VC transformation. *The New Offshoring of Jobs and Global Development* Gary Gereffi, International Institute for Labour Studies, 2006. This book is based on the 7th ILO Social Policy Lectures, which are endowed with the ILO's Nobel Peace Prize, held in Kingston, Jamaica, in December 2005. In keeping with the topics covered in the lecture series, it uses the global value chains perspective to look at how offshore outsourcing has affected the quantity and quality of jobs in the global economy. While offering an overview of the contemporary global labour market, the book examines the issue of global consolidation and industrial upgrading and its promise and perils for development. It introduces an analytical framework for linking jobs in the industrial structures of both advanced and developing economies through the dynamics of global value chains. It reviews the strategies of leading firms, global retailers, branded marketers, and brand name manufacturers and considers the conceptualisation of jobs in the global economy not by their location in particular industries or countries but by their role in global value chains. The author argues that given the special features of global value chains, there is a need to reconsider the contemporary notions of global corporate social responsibility and private as well as public governance.
