

The Respiratory System

ACADEMIC INTEGRATION: BIOLOGY & PHYSIOLOGY 101
Lecturer: _____

Background

The Respiratory System

A healthy respiratory system is essential for an individual's overall health, and respiratory diseases are common. The respiratory system is the part of the body that takes in oxygen from the air and exchanges it with carbon dioxide. The lungs are the primary organs of the respiratory system, and they are responsible for the exchange of gases. The trachea and bronchi are the airways that lead to the lungs.

The lungs take in a large portion of the oxygen used by the body and are attached to the surface of the thoracic cavity by a double-layered membrane. The pleural membranes produce a fluid that allows the lungs to move in and out of the chest. The trachea and bronchi are the airways that lead to the lungs. The trachea is the windpipe, and the bronchi are the branching airways that lead to the lungs. The lungs are the primary organs of the respiratory system, and they are responsible for the exchange of gases.

The amount of oxygen required by the body and carbon dioxide produced by the body are directly proportional to the metabolic rate of the body. The metabolic rate is the rate at which the body uses energy. The metabolic rate is affected by many factors, including age, sex, and activity level. The metabolic rate is also affected by the amount of oxygen and carbon dioxide in the air.

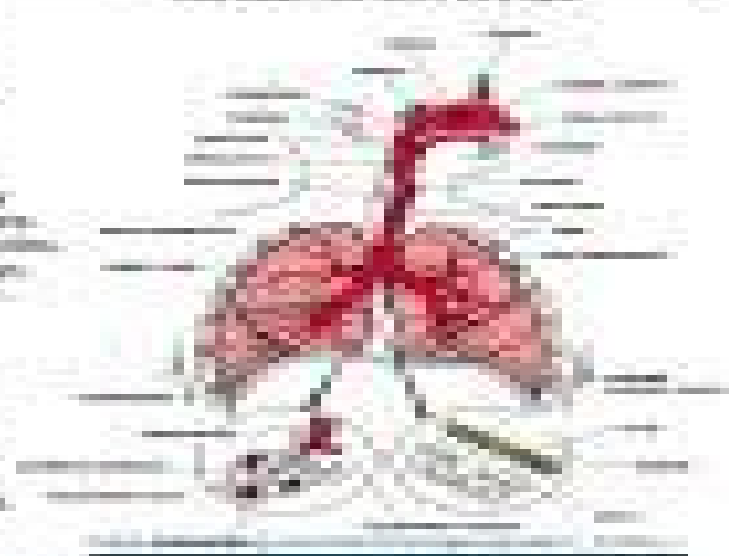

Process of Respiration

Step	Process
1	The respiratory system consists of the trachea, bronchi, and lungs. The trachea is the windpipe, and the bronchi are the branching airways that lead to the lungs. The lungs are the primary organs of the respiratory system, and they are responsible for the exchange of gases.
2	The process of respiration involves the exchange of gases between the body and the environment. The process begins with the intake of air through the nose or mouth. The air then travels through the trachea and bronchi to the lungs.
3	The lungs are divided into two lobes. Each lobe is covered by a double-layered membrane. The pleural membranes produce a fluid that allows the lungs to move in and out of the chest. The trachea and bronchi are the airways that lead to the lungs.
4	The trachea and bronchi are lined with cilia, which are small hair-like structures that move in a coordinated fashion to move mucus and debris out of the airways. The cilia are also responsible for the exchange of gases.
5	The lungs are also lined with cilia. The cilia are responsible for the exchange of gases. The cilia are also responsible for the exchange of gases.
6	The process of respiration involves the exchange of gases between the body and the environment. The process begins with the intake of air through the nose or mouth. The air then travels through the trachea and bronchi to the lungs.
7	The lungs are divided into two lobes. Each lobe is covered by a double-layered membrane. The pleural membranes produce a fluid that allows the lungs to move in and out of the chest. The trachea and bronchi are the airways that lead to the lungs.
8	The trachea and bronchi are lined with cilia, which are small hair-like structures that move in a coordinated fashion to move mucus and debris out of the airways. The cilia are also responsible for the exchange of gases.
9	The lungs are also lined with cilia. The cilia are responsible for the exchange of gases. The cilia are also responsible for the exchange of gases.
