6-7 Investigating Graphs of Polynomial Functions

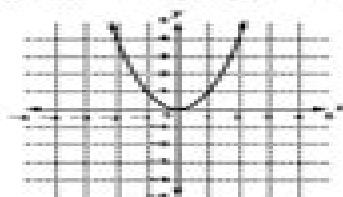

Examine the sign and the exponent of the leading term (term of greatest degree) of a polynomial $P(x)$ to determine the **end behavior** of the function.

Even degree functions: Exponent of leading term is even.

Positive leading coefficient

As $x \rightarrow -\infty$, $P(x) \rightarrow +\infty$.

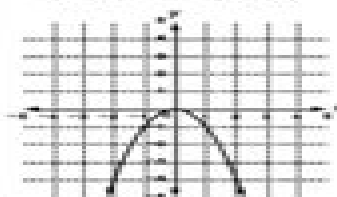

As $x \rightarrow +\infty$, $P(x) \rightarrow +\infty$.

Negative leading coefficient

As $x \rightarrow -\infty$, $P(x) \rightarrow -\infty$.

As $x \rightarrow +\infty$, $P(x) \rightarrow -\infty$.

Read:
As x approaches
positive infinity, $P(x)$
approaches negative
infinity.

Example: $P(x) = 3x^4 + 2x^3 - 5$ Leading term: $3x^4$

End behavior: As $x \rightarrow -\infty$, $P(x) \rightarrow +\infty$.

As $x \rightarrow +\infty$, $P(x) \rightarrow +\infty$.

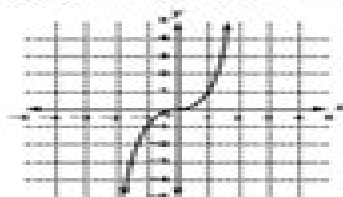

Sign: positive
Degree: 4, even

Odd degree functions: Exponent of leading term is odd.

Positive leading coefficient

As $x \rightarrow +\infty$, $P(x) \rightarrow +\infty$.

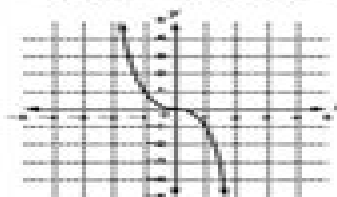

As $x \rightarrow -\infty$, $P(x) \rightarrow -\infty$.

Negative leading coefficient

As $x \rightarrow -\infty$, $P(x) \rightarrow +\infty$.

As $x \rightarrow +\infty$, $P(x) \rightarrow -\infty$.

Example: $P(x) = -2x^5 - 6x^3 + x$ Leading term: $-2x^5$

End behavior: As $x \rightarrow -\infty$, $P(x) \rightarrow +\infty$.

As $x \rightarrow +\infty$, $P(x) \rightarrow -\infty$.

Sign: negative
Degree: 5, odd

Identify the end behavior of each function.

1. $P(x) = 4x^3 + 8x^2 - 5$

Leading term: $4x^3$

Sign and degree: _____

End behavior: _____

2. $P(x) = -9x^5 + 2x^3 - x + 7$

Leading term: _____

Sign and degree: _____

End behavior: _____

Mathematics in Middle and Secondary School Alexander Karp, Nicholas Wasserman, 2014-11-01 The experience and knowledge acquired in teacher education courses should build

important fundamentals for the future teaching of mathematics. In particular, experience in mathematical problem solving and in planning lessons devoted to problem solving is an essential component of teacher preparation. This book develops a problem solving approach and is intended to be a text used in mathematics education courses or professional development for pre-service or in-service middle and secondary school teachers. It can be used both in graduate and undergraduate courses in accordance with the focus of teacher preparation programs. The content of the book is suited especially for those students who are further along in their mathematics education preparation as the text is more involved with mathematical ideas and problem solving and discusses some of the intricate pedagogical considerations that arise in teaching. The text is written not as an introduction to mathematics education, a first course, but rather as a second or probably third course. The book deals both with general methodology issues in mathematics education incorporating a problem solving approach (Chapters 1–6) and with more concrete applications within the context of specific topics: algebra, geometry, and discrete mathematics (Chapters 7–13). The book provides opportunities for teachers to engage in authentic mathematical thinking. The mathematical ideas under consideration build on specific middle and secondary school content while simultaneously pushing the teacher to consider more advanced topics as well as various connections across mathematical domains. The book strives to preserve the spirit of discussion and at times even argument typical of collaborative work on a lesson plan. Based on the accumulated experience of work with future and current teachers, the book assumes that students have some background in lesson planning and extends their thinking further. Specifically, this book aims to provide a discussion of how a lesson plan is constructed, including the ways in which problems are selected or invented, rather than the compilation of prepared lesson plans. This approach reflects the authors' view that the process of searching for an answer is often more important than the formal result.
