Tissue Structure and Function—General Review

1. Define *tissue*. A group of cells similar to one another in structure that perform a common or related function.

2. Use the key choices to identify the major tissue types described below.

Key: a. connective tissue b. epithelium c. muscle d. nervous tissue

- | | |
|-----------------------------|--|
| <u>b; epithelium</u> | 1. lines body cavities and covers the body's external surface |
| <u>c; muscle</u> | 2. pumps blood, flashes urine out of the body, allows one to swing a bat |
| <u>d; nervous c; muscle</u> | 3. transmits electrochemical impulses |
| <u>a; connective</u> | 4. anchors, packages, and supports body organs |
| <u>b; epithelium</u> | 5. cells may absorb, secrete, and filter |
| <u>d; nervous</u> | 6. most involved in regulating and controlling body functions |
| <u>c; muscle</u> | 7. major function is to contract |
| <u>b; epithelium</u> | 8. synthesizes hormones |
| <u>a; connective</u> | 9. the most durable tissue type |
| <u>a; connective</u> | 10. abundant nonliving extracellular matrix |
| <u>a; connective</u> | 11. most widespread tissue in the body |
| <u>d; nervous</u> | 12. forms nerves and the brain |

Epithelial Tissue

3. Describe five general characteristics of epithelial tissue. The cells fit closely together, forming sheetlike membranes.

Little intercellular material between the cells. Avascular. Membrane has a free edge. Generally has a high regenerative capacity.

4. On what basis are epithelial tissues classified? Number of layers and cell shape.

General and Oral Pathology for the Dental Hygienist Leslie DeLong, Nancy

Burkhart, 2013-02-25 General and Oral Pathology for the Dental Hygienist 2nd Edition is a comprehensive study of the general concepts of pathophysiology as they relate to systemic and oral conditions The only dental hygiene book on the market to address both oral and general pathology General and Oral Pathology for the Dental Hygienist is the ideal solution for programs that cover oral and general pathology in one course and provides an easily accessible review of general pathology for programs that cover oral pathology separately The Oral Pathology section is uniquely organized by distinct recognizable characteristics of lesions for example white lesions or radiolucent lesions a uniquely practical and highly effective way of presenting this information since dental hygienists have to evaluate pathology based on what they see This allows the student to easily identify what he or she might be looking at and to differentiate between lesions with similar appearances

Handbook of Tissue Optical Clearing Valery V. Tuchin, Dan Zhu, Elina A. Genina, 2022-02-08

Biomedical photonics is currently one of the fastest growing fields connecting research in physics optics and electrical engineering coupled with medical and biological applications It allows for the structural and functional analysis of tissues and cells with resolution and contrast unattainable by any other methods However the major challenges of many biophotonics techniques are associated with the need to enhance imaging resolution even further to the sub cellular level as well as translate them for in vivo studies The tissue optical clearing method uses immersion of tissues into optical clearing agents OCAs that reduces the scattering of tissue and makes tissue more transparent and this method has been successfully used ever since This book is a self contained introduction to tissue optical clearing including the basic principles and in vitro biological applications from in vitro to in vivo tissue optical clearing methods and combination of tissue optical clearing and various optical imaging for diagnosis The chapters cover a wide range of issues related to the field of tissue optical clearing mechanisms of tissue optical clearing in vitro and in vivo traditional and innovative optical clearing agents recent achievements in optical clearing of different tissues including pathological tissues and blood for optical imaging diagnosis and therapy This book provides a comprehensive account of the latest research and possibilities of utilising optical clearing as an instrument for improving the diagnostic effectiveness of modern optical diagnostic methods The book is addressed to biophysicist researchers graduate students and postdocs of biomedical specialties as well as biomedical engineers and physicians interested in the development
