

Anatomy of the Respiratory System

Upper and Lower Respiratory System Structures

1. The respiratory system is divided into the upper and lower respiratory systems.

2. The respiratory system is divided into the upper and lower respiratory systems. The upper respiratory system includes the nasal cavity, oral cavity, and pharynx. The lower respiratory system includes the larynx, trachea, bronchi, and lungs. The diaphragm is a muscular partition that separates the thoracic cavity from the abdominal cavity. The pleural cavity is the space between the two layers of the pleura. The visceral pleura is the layer of the pleura that is attached to the lung. The parietal pleura is the layer of the pleura that is attached to the chest wall. Surfactant is a substance that reduces the surface tension of the alveoli. The alveoli are small air sacs in the lungs where gas exchange occurs. The capillaries are small blood vessels in the lungs where gas exchange occurs. The deadspace is the volume of air in the respiratory system that does not participate in gas exchange. The functional residual capacity (FRC) is the volume of air in the lungs at the end of a normal expiration. The tidal volume (TV) is the volume of air that enters or leaves the lungs during a normal breath. The inspiratory capacity (IC) is the volume of air that can be inhaled after a normal expiration. The vital capacity (VC) is the volume of air that can be exhaled after a maximal inspiration. The residual volume (RV) is the volume of air that remains in the lungs after a maximal expiration. The total lung capacity (TLC) is the volume of air in the lungs at the end of a maximal inspiration. The expiratory reserve volume (ERV) is the volume of air that can be exhaled after a normal inspiration. The inspiratory reserve volume (IRV) is the volume of air that can be inhaled after a normal expiration. The dead space volume (DSV) is the volume of air in the respiratory system that does not participate in gas exchange. The anatomical dead space (ADS) is the volume of air in the trachea and bronchi. The alveolar dead space (ALVDS) is the volume of air in the alveoli that does not participate in gas exchange. The physiological dead space (PDS) is the sum of the anatomical and alveolar dead spaces. The minute volume (MV) is the volume of air that enters or leaves the lungs per minute. The alveolar ventilation (VA) is the volume of air that reaches the alveoli per minute. The pulmonary blood flow (Qp) is the volume of blood that flows through the lungs per minute. The systemic blood flow (Qs) is the volume of blood that flows through the systemic circulation per minute. The cardiac output (CO) is the volume of blood that is pumped by the heart per minute. The arterial blood pressure (ABP) is the pressure in the arteries. The central venous pressure (CVP) is the pressure in the central veins. The pulmonary artery pressure (PAP) is the pressure in the pulmonary artery. The pulmonary capillary pressure (PCP) is the pressure in the pulmonary capillaries. The left atrium is the chamber of the heart that receives blood from the superior and inferior vena cava. The left ventricle is the chamber of the heart that pumps blood into the aorta. The right atrium is the chamber of the heart that receives blood from the superior and inferior vena cava. The right ventricle is the chamber of the heart that pumps blood into the pulmonary artery. The superior vena cava (SVC) is the vein that carries blood from the upper body to the right atrium. The inferior vena cava (IVC) is the vein that carries blood from the lower body to the right atrium. The aorta is the artery that carries blood from the left ventricle to the rest of the body. The common carotid artery is the artery that carries blood from the aorta to the head and neck. The subclavian artery is the artery that carries blood from the aorta to the upper limbs. The brachial artery is the artery that carries blood from the subclavian artery to the forearm. The radial artery is the artery that carries blood from the brachial artery to the hand. The ulnar artery is the artery that carries blood from the brachial artery to the hand.
