Functional Form and Heterogeneity in Models for Count Data William Greene, 2007 This study presents several extensions of the most familiar models for count data the Poisson and negative binomial models We develop an encompassing model for two well known variants of the negative binomial model the NB1 and NB2 forms We then analyze some alternative approaches to the standard log gamma model for introducing heterogeneity into the loglinear conditional means for these models The lognormal model provides a versatile alternative specification that is more flexible and more natural than the log gamma form and provides a platform for several two part extensions including zero inflation hurdle and sample selection models We briefly present some alternative approaches to modeling heterogeneity We also resolve some features in Hausman Hall and Griliches 1984 Economic models for count data with an application to the patents R D relationship Econometrica 52 909 938 widely used panel data treatments for the Poisson and negative binomial models that appear to conflict with more familiar models of fixed and random effects Finally we consider a bivariate Poisson model that is also based on the lognormal heterogeneity model Two recent applications have used this model We suggest that the correlation estimated in their model frameworks is an ambiguous measure of the correlation of the variables of interest and may substantially overstate it We conclude with a detailed application of the proposed methods using the data employed in one of the two aforementioned bivariate Poisson studies

Debating Immigration in the Age of Terrorism, Polarization, and Trump Joshua Woods, C. Damien Arthur, 2017-09-27 This book offers a broad interdisciplinary approach to the changes in the U S immigration debate before and after 9 11 A nation s reaction to foreigners has as much to do with sociology as it does with political science economics and psychology Without drawing on this knowledge our understanding of the immigration debate remains mundane partial and imperfect Therefore our story accounts for multiple factors including culture and politics power organizations social psychological processes and political change Examining this relationship in the contemporary context requires a lengthy voyage across academic disciplines a synthesis of seemingly contradictory assumptions and a grasp of research traditions so vast and confusing that an accurate rendering may seem implausible And yet to tell the story of the immigration debate in the age of terrorism polarization and Trump in any other way is to tell it in part The immigration debate in the United States has always been about openness Two questions in particular how open should the door be and what type of immigrant should walk through it have characterized policy disputes for well over a century In the current debate expansionists want to see more legal immigrants in the U S and greater tolerance if not respect for immigrants Restrictionists favor lower levels of immigration stronger borders and tighter law enforcement measures to stop the stream of illegal migration and alleged crime The aim of this book is to describe how these opposing views materialized in the news media political rhetoric and ultimately in policy Much of our argument rests on the idea that history matters that the dominant narrative about immigration is in constant flux and that the winner of the immigration debate is determined by a vector of contextual elements the joint impact of current events enduring traditions and political economic forces Our approach to the immigration debate avoids deterministic claims and grand scale projections Although we argue with conviction that a climate of fear played an important role in shaping the debate the fear itself and its effects on social attitudes and public policy were neither inevitable nor necessarily long lasting
