**The Abundant University** Michael D. Smith, 2023-09-19 Why our current system of higher education is financially and morally unsustainable and how to address the crisis with the creative implementation of digital technologies For too long our system of higher education has been defined by scarcity scarcity in enrollment scarcity in instruction and scarcity in credentials In addition to failing students professionally this system has exacerbated social injustice and socioeconomic stratification across the globe In The Abundant University Michael D Smith argues that the only way to create a financially and morally sustainable higher education system is by embracing digital technologies for enrolling instructing and credentialing students the same technologies that we have seen create abundance in access to resources in industry after industry The Abundant University explains how we got our current system why it's such an expensive inefficient mess and how a system based on exclusivity cannot foster inclusivity Smith challenges the resistance to digital technologies that

we have already seen among numerous institutions citing the examples of faculty resistance toward digital learning platforms While acknowledging the understandable self preservation instinct of our current system of residential education Smith makes a case for how technology can engender greater educational opportunity and create changes that will benefit students employers and society as a whole

**The Downsizing of Economics Professors** Steven Payson,2017-10-24 The number of economics professors now teaching at universities will decline substantially over the next couple of decades This will happen for one main reason the advent of distance learning especially in the form of Massive Open Online Courses MOOCs which enable a single professor to lecture to tens of thousands of students Other academic fields will undoubtedly encounter similar reductions in their numbers of professors However as this book argues at several levels academic economics is the one profession that is most qualified to study and address the topic In this sense it is the one profession that should best recognize the economic benefits of this transition which this book describes and take responsibility for leading the transition among all academic fields Unfortunately the position espoused by several academic economists has been against this inevitable transition a position that politically upholds their employment and the status of their institutions They have asserted that MOOCs lower the quality of education and threaten the financial viability of traditional universities Based on extensive evidence and analysis however this book argues that their position untenable Their position is hypocritical as well given the fact that economics professors more than anyone else have upheld the idea that jobs should be lost and new ones should be gained in response to technological changes that promote economic efficiency There is also irony in the fact that the high tuitions required to maintain traditional classrooms effectively deny a college education to those who cannot afford it Thus unsound arguments that traditional lectures are needed to preserve the quality of education actually do not improve the quality of education but have the only real effect of denying education to many people who would otherwise be able to receive it To address this topic comprehensively the book goes deep into fundamental questions about what economics professors really do with their time and energy and what they should be doing in the best interests of their students and of society These are areas that the profession has needed to address for a long time but has failed to do so
