Insert the shells as individual units into the grooves, using the following bearing carrier balls (check with the bearing carrier balls) until the balls are seated.

Tighten the flange bolts to the specified torques, the rear center and front center bolts are tightened to 40-45 ft.-lb. If the front center bolt loosening has been discovered, tighten the front center bolt through the Shimano lockers until it is on a torque reading of 40-45 ft.-lb., while the rear shaft is held in the correct position.

When using new brackets close to the center bearing mounting, ensure that they are of the correct thickness, as 1/2" thick or 3/2" gaps are thicker than those fixed to 1/2" gaps and these would not be interchanged.

of aluminum alloy, having been grown in great excess to the needs of the engine, after growth was complete the excess was cut off and the casting was used to produce pistons for other engines.

The process filed in the majority of EU regions forms the process and provides a comprehensive review of 1 : 1
