Algebra, Meaning, and Computation Kokichi Futatsugi, Jean-Pierre Jouannaud, José Meseguer, 2006-06-21 This volume honoring the computer science pioneer Joseph Goguen on his 65th Birthday includes 32 refereed papers by leading researchers in areas spanned by Goguen's work. The papers address a variety of topics from meaning, meta logic, specification and composition, behavior and formal languages as well as models, deduction and computation by key members of the research community in computer science and other fields connected with Joseph Goguen's work. **Mathematical Foundations of Computer Science 2003** Branislav Rovan, Peter Vojtas, 2003-12-03 This book constitutes the refereed proceedings of the 28th International Symposium on Mathematical Foundations of Computer Science MFCS 2003 held in Bratislava, Slovakia in August 2003. The 55 revised full papers presented together with 7 invited papers were carefully reviewed and selected from 137 submissions. All current aspects in theoretical computer science are addressed, ranging from discrete mathematics, combinatorial optimization, graph theory, networking, algorithms and complexity to programming theory, formal methods and mathematical logic. **Whitaker's Cumulative Book List**, 1982 **Handbook of Logic in Artificial Intelligence and Logic Programming: Volume 5: Logic Programming** Dov M. Gabbay, C. J. Hogger, J. A. Robinson, 1998-01-08 The Handbook of Logic in Artificial Intelligence and Logic Programming is a multi-volume work covering all major areas of the application of logic to artificial intelligence and logic programming. The authors are chosen on an international basis and are leaders in the fields covered. Volume 5 is the last in this well-regarded series. Logic is now widely recognized as one of the foundational disciplines of computing. It has found applications in virtually all aspects of the subject from software and hardware engineering to programming languages and artificial intelligence. In response to the growing need for an in-depth survey of these applications, the Handbook of Logic in Artificial Intelligence and its companion, the Handbook of Logic in Computer Science, have been created. The Handbooks are a combination of authoritative exposition, comprehensive survey and fundamental research exploring the underlying themes in the various areas. Some mathematical background is assumed and much of the material will be of interest to logicians and mathematicians. Volume 5 focuses particularly on logic programming. The chapters, which in many cases are of monograph length and scope, emphasize possible unifying themes. **New York Math: Math B**, 2000 *British Books in Print*, 1986 ENC Focus, 2001 *Athenaeum and Literary Chronicle* James Silk Buckingham, John Sterling, Frederick Denison Maurice, Henry Stebbing, Charles Wentworth Dilke, Thomas Kibble Hervey, William Hepworth Dixon, Norman Maccoll, Vernon Horace Rendall, John Middleton Murry, 1883 Mathematical Methods in Physics, Engineering, and Chemistry Brett Borden, James Luscombe, 2019-11-12 A concise and up-to-date introduction to mathematical methods for students in the physical sciences.
