Understanding DNA Replication

Directions: Using model materials to demonstrate DNA replication:

1. On a separate Word document, present a detailed analysis of DNA replication at one replication fork. Use drawing, descriptions, and/or captions detailing the process.
2. In the analysis include the following:
 - a. Show how the leading and lagging strands are synthesized
 - b. Show the proteins (enzymes) involved in DNA replication and what their functions are

Understanding DNA Transcription and Translation

Directions: Complete the following questions. Questions 1- 3 can be submitted on the same document as the Understanding DNA Replication assignment. Refer to Figure 1 as it illustrates the process of DNA transcription, translation, and protein synthesis.

1. The stages of transcription are initiation, elongation, and termination. Draw a representation of each of these stages in a separate Word document. Be sure to include the names of important enzymes and locations.
2. Once mRNA is created through transcription, it is often processed. Explain how mRNA can be processed. Include the names of important enzymes or structures.
3. Translation is how mRNA gets used to create a peptide sequence. Draw what is going on inside a ribosome. Be sure to include the locations of mRNA, tRNA, each subunit of the ribosome, and where the amino acid sequence forms.
