### **Unsupervised Information Extraction by Text Segmentation** Eli

Cortez, Altigran S. da Silva, 2013-10-23 A new unsupervised approach to the problem of Information Extraction by Text Segmentation IETS is proposed implemented and evaluated herein The authors approach relies on information available on pre-existing data to learn how to associate segments in the input string with attributes of a given domain relying on a very effective set of content based features The effectiveness of the content based features is also exploited to directly learn from test data structure based features with no previous human driven training a feature unique to the presented approach Based on the approach a number of results are produced to address the IETS problem in an unsupervised fashion In particular the authors develop implement and evaluate distinct IETS methods namely ONDUX JUDIE and iForm ONDUX On Demand Unsupervised Information Extraction is an unsupervised probabilistic approach for IETS that relies on content based features to bootstrap the learning of structure based features JUDIE Joint Unsupervised Structure Discovery and Information

Extraction aims at automatically extracting several semi structured data records in the form of continuous text and having no explicit delimiters between them In comparison with other IETS methods including ONDUX JUDIE faces a task considerably harder that is extracting information while simultaneously uncovering the underlying structure of the implicit records containing it iForm applies the authors approach to the task of Web form filling It aims at extracting segments from a data rich text given as input and associating these segments with fields from a target Web form All of these methods were evaluated considering different experimental datasets which are used to perform a large set of experiments in order to validate the presented approach and methods These experiments indicate that the proposed approach yields high quality results when compared to state of the art approaches and that it is able to properly support IETS methods in a number of real applications The findings will prove valuable to practitioners in helping them to understand the current state of the art in unsupervised information extraction techniques as well as to graduate and undergraduate students of web data management
