**Application-Inspired Linear Algebra** Heather A. Moon, Thomas J. Asaki, Marie A. Snipes, 2022-05-20 This textbook invites students to discover abstract ideas in linear algebra within the context of applications Diffusion welding and radiography the two central applications are introduced early on and used throughout to frame the practical uses of important linear algebra concepts Students will learn these methods through explorations which involve making conjectures and answering open ended questions By approaching the subject in this way new avenues for learning the material emerge For example vector spaces are introduced early as the appropriate setting for the applied problems covered and an alternative determinant free method for computing eigenvalues is also illustrated In addition to the two main applications the authors also describe possible pathways to other applications which fall into three main areas Data and image analysis including machine learning dynamical modeling and optimization and optimal design Several appendices are included as well one of which offers an insightful walkthrough of proof techniques Instructors will also find an outline for how to use the book in a course Additional resources can be accessed on the authors website including code data sets and other helpful material Application Inspired Linear Algebra will motivate and immerse undergraduate students taking a first course in linear algebra and will provide instructors with an indispensable application first approach

**Numerical Algebra, Matrix Theory, Differential-Algebraic Equations and Control Theory** Peter Benner, Matthias Bollhöfer, Daniel Kressner, Christian Mehl, Tatjana Stykel, 2015-05-09 This edited volume highlights the scientific contributions of Volker Mehrmann a leading expert in the area of numerical linear algebra matrix theory differential algebraic equations and control theory These mathematical research areas are strongly related and often occur in the same real world applications The main areas where such applications emerge are computational engineering and sciences but increasingly also social sciences and economics This book also reflects some of Volker Mehrmann's major career stages Starting out working in the areas of numerical linear algebra his first full professorship at TU Chemnitz was in Numerical Algebra hence the title of the book and matrix theory Volker Mehrmann has made significant contributions to these areas ever since The highlights of these are discussed in Parts I and II of the present book Often the development of new algorithms in numerical linear algebra is motivated by problems in system and control theory These and his later major work on differential algebraic equations to which he together with Peter Kunkel made many groundbreaking contributions are the topic of the chapters in Part III Besides providing a scientific discussion of Volker Mehrmann's work and its impact on the development of several areas of applied mathematics the individual chapters stand on their own as reference works for selected topics in the fields of numerical linear algebra matrix theory differential algebraic equations and control theory
