 Learning in Translation introduces machine learning ML theories and technologies that are most relevant to translation  
 processes approaching the topic from a human perspective and emphasizing that ML and ML driven technologies are tools  
 for humans Providing an exploration of the common ground between human and machine learning and of the nature of  
 translation that leverages this new dimension this book helps linguists translators and localizers better find their added value  
 in a ML driven translation environment Part One explores how humans and machines approach the problem of translation in  
 their own particular ways in terms of word embeddings chunking of larger meaning units and prediction in translation based  
 upon the broader context Part Two introduces key tasks including machine translation translation quality assessment and  
 quality estimation and other Natural Language Processing NLP tasks in translation Part Three focuses on the role of data in  
 both human and machine learning processes It proposes that a translator's unique value lies in the capability to create  
 manage and leverage language data in different ML tasks in the translation process It outlines new knowledge and skills that

need to be incorporated into traditional translation education in the machine learning era The book concludes with a discussion of human centered machine learning in translation stressing the need to empower translators with ML knowledge through communication with ML users developers and programmers and with opportunities for continuous learning This accessible guide is designed for current and future users of ML technologies in localization workflows including students on courses in translation and localization language technology and related areas It supports the professional development of translation practitioners so that they can fully utilize ML technologies and design their own human centered ML driven translation workflows and NLP tasks
