

Unit 7 - The Plasma Membrane

Worksheet - Comparison of Membrane Transport

Directions: Use the diagram to complete each task or question.

1. Label each type of transport in the boxes of the diagram.
2. Identify the transport protein(s) in the diagram.
3. Label the areas of **high** concentration for each molecule (shape).
4. Label the areas of **low** concentration for each molecule (shape).

5. How is ATP used in the bottom diagram? Why is it essential?
ATP is used to "power" the protein pump. Phosphorylation causes the protein pump to change shape and push molecules across the plasma membrane. This allows molecules to be pushed from areas of low concentration to areas of high concentration.
6. Why do the molecules "want" to move across the membrane in the first two diagrams?
Diffusion causes molecules to move from areas of high concentration to areas of low concentration.
7. Why is it important for molecules to be able to travel into and out of your body's cells?
Nutrients need to be able to move into cells as needed. Likewise, cellular waste and important cellular products need to be moved out of the cell as needed.

Water Transport in Cells and Tissues Charles Randall House,1974 **Intracellular Transport** Katherine Brehme Warren,2014-05-12 Intracellular Transport is a collection of papers that examines the processes of and the mechanisms underlying intracellular transport One paper describes that all active transport processes in the amoeba are intracellular and depend on dynamic transformations of membrane into cytoplasm and of cytoplasm into membrane Another paper discusses the kinetics of membrane transport of which the phenomena of counterflow can become a mobile carrier system The paper notes that the specific transport properties of membranes are conferred by the proteins of the surfaces that are grouped as macromolecular complexes probably similar to those of enzymes One paper describes the concept of parametric pumping an oscillation driven separation process as a possible model for active transport in biological cells Another paper compares the fine scale diffusion effects that happen in a mixture without large scale concentration gradients and where the effect are on a large scale The homogenous kinetic law can be used in the large scale situation the law already can account for any of the fine scale diffusion effects The paper notes that without large scale concentration gradients the transport event is from a local region to a nearby reaction site only Where the effects are on a large scale the diffusion results in a gross transport of over distances larger than molecular dimensions This collection can prove useful for mathematicians cellular biologists physical chemists physiologists electron microscopists geneticists and engineers **Transport Organs** G.
