Primates, Pathogens, and Evolution

Jessica F. Brinkworth,Kate Pechenkina,2013-08-30 The immune systems of human and non human primates have diverged over time such that some species differ considerably in their susceptibility symptoms and survival of particular infectious diseases Variation in primate immunity is such that major human pathogens such as immunodeficiency viruses herpesviruses and malaria inducing species of Plasmodium elicit striking differences in immune response between closely related species

and within primate populations These differences in immunity are the outcome of complex evolutionary processes that include interactions between the host its pathogens and symbiont commensal organisms The success of some pathogens in establishing persistent infections in humans and other primates has been determined not just by the molecular evolution of the pathogen and its interactions with the host but also by the evolution of primate behavior and ecology microflora immune factors and the evolution of other biological systems To explore how interactions between primates and their pathogens have shaped their mutual molecular evolution Primates Pathogens and Evolution brings together research that explores

comparative primate immune function the emergence of major and neglected primate diseases primate microorganism molecular interactions and related topics This book will be of interest to anyone curious as to why infectious diseases manifest differently in humans and their closest relatives It will be of particular interest to scholars specializing in human and non human primate evolution epidemiology and immunology and disease ecology Primates Pathogens and Evolution offers an overview and discussion of current findings on differences in the molecular mechanics of primate immune response as well as on pathogen mediated primate evolution and human and non human primate health

New Directions in Conservation Medicine A. Alonso Aguirre, Richard Ostfeld, Peter Daszak, 2012-05-28 In recent years species and ecosystems have been threatened by many anthropogenic factors manifested in local and global declines of populations and species Although we consider conservation medicine an emerging field the concept is the result of the long evolution of transdisciplinary thinking within the health and ecological sciences and the better understanding of the complexity within these various fields of knowledge Conservation medicine was born from the cross fertilization of ideas generated by this new transdisciplinary design It examines the links among changes in climate habitat quality and land use emergence and re emergence of infectious agents parasites and environmental contaminants and maintenance of biodiversity and ecosystem functions as they sustain the health of plant and animal communities including humans During the past ten years new tools and institutional initiatives for assessing and monitoring ecological health concerns have emerged landscape epidemiology disease ecological modeling and web based analytics New types of integrated ecological health assessment are being deployed these efforts incorporate environmental indicator studies with specific biomedical diagnostic tools Other innovations include the development of non invasive physiological and behavioral monitoring techniques the adaptation of modern molecular biological and biomedical techniques the design of population level disease monitoring strategies the

creation of ecosystem based health and sentinel species surveillance approaches and the adaptation of health monitoring systems for appropriate developing country situations New Directions of Conservation Medicine Applied Cases of Ecological Health addresses these issues with relevant case studies and detailed applied examples New Directions of Conservation Medicine challenges the notion that human health is an isolated concern removed from the bounds of ecology and species interactions Human health animal health and ecosystem health are moving closer together and at some point it will be inconceivable that there was ever a clear division *A Bird's-Eye View of Veterinary Medicine* Carlos C.

Perez-Marin,2012-02-22 Veterinary medicine is advancing at a very rapid pace particularly given the breadth of the discipline This book examines new developments covering a wide range of issues from health and welfare in livestock pets and wild animals to public health supervision and biomedical research As well as containing reviews offering fresh insight into specific issues this book includes a selection of scientific articles which help to chart the advance of this science The book is divided into several sections The opening chapters cover the veterinary profession and veterinary science in general while later chapters look at specific aspects of applied veterinary medicine in pets and in livestock Finally research papers are grouped by specialisms with a view to exploring progress in areas such as organ transplantation therapeutic use of natural substances and the use of new diagnostic techniques for disease control This book was produced during World Veterinary Year 2011 which marked the 250th anniversary of the veterinary profession It provides a fittingly concise and enjoyable overview of the whole science of veterinary medicine *Emerging Infectious Diseases* ,2017-07 *Ethology and Behavioral Ecology of Sirenia* Helene Marsh,2022-05-09 Despite their rich fossil history there are only four surviving species of sirenians or sea cows the only fully aquatic herbivorous mammals The three species of manatees and the dugong live in the coastal waters rivers and lakes of more than 80 tropical and subtropical countries and are all on the IUCN Red List of Threatened Species This book examines sirenian conservation biology through the lens of their behavioral ecology and ethology Sirenian feeding diving movement social and reproductive behaviors are reviewed by an international team of scientists from eight countries with an emphasis on data gathered in the past 15 years **Advances in Marine Vertebrate Research in Latin America**

Marcos R. Rossi-Santos,Charles W. Finkl,2017-08-10 This book gathers the most recent research findings on ecology and conservation of marine vertebrates in Latin America making use of high technological methods to show readers the diversity of the marine research that has been conducted in these countries over the last decades The book brings authors from more than 23 institutions of 7 different countries developing the most diverse research aiming at ocean conservation through the ecology of different vertebrate animals such as whales dolphins manatees turtles seabirds and fish This book deals with technological advances and innovation in the ecology and conservation of marine vertebrates in Latin America This eclectic collection is broad in scope but provides detailed summaries of new methods that are deployed in the study of marine environmental conservation Key issues revolve around the development and application of educational methodologies in the

field of marine vertebrate research which provide a rational basis for better management of marine environments using modern techniques associated with GIS satellite tracking aerial systems bioacoustics biogeochemistry genetics underwater videography species photoidentification molecular biology trophic ecological methods ethological methods and behavioural ecology among others Discussion and elucidation of these kinds of techniques are aimed at university level students and post graduate researchers The scope of this volume includes whales sharks rays dolphins tropical fishes turtles manatees as well as aspects of Latin American marine ecosystem conservation Researchers in this biogeographic region as well as others involved with marine vertebrate research will find this work essential reading
