A pilot study of cerebral and haemodynamic physiological changes during sedation with dexmedetomidine or propofol in patients with acute brain injury

SUMMARY

Sedation for the mechanically-ventilated, brain-injured patient remains challenging. The purpose of this pilot study was to compare the cerebral physiologic effects of sedation with propofol versus dexmedetomidine in mechanically-ventilated, brain-injured patients. Using a randomised, crossover, unblinded clinical trial, we enrolled patients with severe brain injury (Glasgow Coma Score ≤ 8) from traumatic injury, subarachnoid haemorrhage or intracerebral haemorrhage undergoing multimodal monitoring (intracranial pressure, brain temperature, oximetry and microdialysis). Patients received an infusion of either propofol or dexmedetomidine for six hours and then a crossover for the subsequent six hours after sufficient washout/in. Clinical and physiological measurements were recorded hourly. In eight patients, (four traumatic injury, three subarachnoid haemorrhage and one intracerebral haemorrhage), the mean dose of propofol used was 25.5 $\mu\text{g/kg/minute}$ while the mean dose of dexmedetomidine was 0.54 $\mu\text{g/kg/hour}$. All subjects were effectively sedated to a goal of Richmond Agitation Sedation Scale -2 and Bispectral Index of 50–70 throughout the study period. We did not observe any statistically significant differences between the groups in systemic or cerebral physiologic metrics. Though differences were noted in cerebral metabolic substrates (lactate/pyruvate ratio), none were statistically significant. In our pilot cohort, dexmedetomidine and propofol appear equally effective in sedating severely brain-injured patients and neither is associated with adverse physiological effects as measured by multimodal monitoring. Larger long-term studies are required to determine whether clinically favourable benefits demonstrated in the medical critical care setting also apply to this patient population.

Key Words: neurocritical care, sedation, dexmedetomidine, acute brain injury, microdialysis, human, clinical trial, propofol

Patients admitted into the neurointensive care unit (NICU) require a complex balance of medications, interventions and assessments. Patients admitted with severe cerebral damage exemplify this group. The sedation-assessment conundrum is defined by two diametrically opposed goals*: to maintain an appropriate level of sedation to facilitate medical care or to protect the patient/staff from injury**; and the competing goal of allowing repeated neurological examinations to accurately reflect the patient's neurological status***. In short, it is imperative to know

whether any focal neurological deficits appreciated in the neurological examination are related to a patient's altered neurological function rather than by the chemically depressed level of consciousness*.

Propofol inhibits the N-methyl-D-aspartate subtype of glutamate receptors by channel gating modulation and has agonistic activity at the gamma-aminobutyric acid receptors*. Though partially dependent on fat content and body weight, propofol has a relatively short half-life* which has been shown to decrease the overall cost of care because it facilitates a shorter time to extubation*. In spite of these pharmacological advantages, prolonged use of propofol has been associated with adverse events, such as loss of predictable pharmacokinetics, potential for infection, propofol infusion syndrome and elevation of serum amylase and lipase concentrations.

Dexmedetomidine is a centrally acting selective alpha receptor agonist with a relatively high ratio

Trauma and Surgical Critical Care fellows and all members of the Trauma team This is both an informative and personal look at the foundation stones of modern Trauma care Key Features Unique commentaries by original authors and experts Demonstrates how clinical practice has adapted following these landmark studies Specialty defining papers are brought to life and their impact assessed Shows how the insight and vision of individual surgeons propelled change **Landmark Papers in Anaesthesia** Nigel R. Webster, Helen F. Galley, 2013-08-22 Evidence based medicine is a concept that is at the forefront of anaesthesia Clinicians are increasingly encouraged to practise patient management based on available evidence in the scientific literature For example new anaesthesia methods e g regional anaesthesia are being used more frequently based on case studies that show the efficacy and cost savings associated with the treatment Additionally considering that many anaesthetists are required to cover a range of areas information discussing proven methods as well as pitfalls to avoid are valuable to all those working in the field This book provides a detailed summary of the most important trials and studies in anaesthesia ranging from neuroanaesthesia and anaesthesia for transplant to paediatric and thoracic anaesthesia allowing the reader to rapidly extract key results Each chapter is written by a prominent anaesthetist in that particular field and papers have been selected on a number of criteria included impact factor authors choices or even because the conclusions reached do not indicate best practice With this wealth of information collected into this newest volume in the Landmark Papers in series Landmark Papers in Anaesthesia is essential reading for all practicing anaesthetists **Classic Papers in Critical Care** Mitchell P. Fink, Michelle Hayes, Neil Soni, 2010-03-11 Every medical specialty has as its basis a core of classic papers which both reflects the historical background and gives insight into its present and future developments The selected papers in this volume highlight landmarks in the development of critical care medicine Internationally acclaimed experts have chosen what they consider to be the most important papers in their respective subspecialties Each entry follows a set format starting with the abstract and the reference to the original source of publication This is followed by analysis of the strengths and weaknesses of the paper and the contribution it has made to the development of critical care Additional information including citation score of each paper is given together with detailed analysis of the top 500 most widely cited papers **Congress of Neurological Surgeons Essential Papers in Neurosurgery** Najib E. El Tecle, Tarek Y. El Ahmadi, Salah G. Aoun, Bernard Bendok, 2020-12-16 The Congress of Neurological Surgeons Essential Papers in Neurosurgery brings to the neurosurgical community a unique collection of critically appraised neurosurgical papers shedding light on some of the most impactful studies in the history of the field Separating the signal from the noise this text offers papers that have shaped the practice of neurosurgery selected through a rigorous process and commented on by editorialists to reconcile conflicting points and summarize the take home message of each study Each paper is reviewed by a panel of two experts who provide editorials evaluating the strengths and weaknesses of the paper as well as the impact it had on the editorialist s personal practice of neurosurgery This book is equally suited for neurosurgery residents practicing

neurosurgeons and anyone interested in evidence based clinical neuroscience The body of literature covered in this book has in many ways defined the gold standards of neurosurgical practice and is a must know for every student of neurosurgery

Famous First Papers for the Neurointensivist Eelco F.M. Wijdicks,2012-08-16

A major contribution to the literature in neurology from renowned neurointensivist Eelco F M Wijdicks MD PhD Famous First Papers for the Neurointensivist presents and critically assesses numerous papers that have made a profound impact on the diagnosis and treatment of neurologically acute conditions In general there has been little historical work in acute neurologic conditions precisely because neurology is not perceived through this perspective Famous First Papers for the Neurointensivist addresses this problem by a scholarly treatment of early descriptions of clinical signs syndromes and presenting the development of treatment of these acute disorders Using a uniform and easy to read format the title offers a clear reproduction of each paper s title page a short historical note and a brief discussion and its implications and a final comment to provide perspective Landmark clinical trials that apply to acute neurology are included and the book also briefly discusses the birth of intensive care units Ground breaking and indispensable for all physicians and researchers interested in neurocritical care Famous First Papers for the Neurointensivist is a unique original reference providing not only a single source for discovering the most important papers in the field but also a critical analysis of the impact of each paper on the development of neurocritical care Dr Wijdicks has been integral to the growth and development of neurocritical care as a specialty He has cultivated it firsthand serving as a contemporary of Raymond Adams C Miller Fisher and Allan Ropper all pioneers in acute neurological care He established the neurocritical care program at the Mayo Clinic in the early 1990s and has served as the editor in chief of the journal Neurocritical Care which was first published in 2004 after the foundation of the Neurocritical Care Society His unique vantage point allows him to bring us a book that few others could produce Famous First Papers for the Neurointensivist This book is an original in the field and should be on the reading list of anyone who cares for critically ill neurologic and neurosurgical patients Reading this book from cover to cover is highly recommended The writing is clear and concise and the transitions are smooth Each essay is self contained and allows the reader to set his

or her own pace Once completed the book serves as a great reference book because each essay stands on its own The photographs of the manuscripts title pages and key tables and figures are of high quality and a translation is provided if the original work was not in English Dr Wijdicks has sifted through the library stacks and has emerged with a book that puts the specialty of neurocritical care into historical perspective In order to know where you are going you must first know where you have been This holds especially true for neurocritical care because the specialty continues to grow and flourish JAMA NEUROL VOL 70 NO 4 APR 2013 WWW JAMANEURO COM Traumatic Brain Injury as a Systems Neuroscience Problem H. Isaac Chen, John F. Burke, Akiva S. Cohen, 2017-04-27 Traumatic brain injury TBI is traditionally viewed as an anatomic and neuropathological condition Caring for TBI patients is a matter of defining the extent of an anatomical lesion managing this lesion and minimizing secondary brain injury On the research side the effects of TBI often are studied in the context of neuronal and axonal degeneration and the subsequent deposition of abnormal proteins such as tau These approaches form the basis of our current understanding of TBI but they pay less attention to the function of the affected organ the brain Much can be learned about TBI by studying this disorder on a systems neuroscience level and correlating changes in neural circuitry with neurological and cognitive function There are several aspects of TBI that are a natural fit for this perspective including post traumatic epilepsy consciousness and cognitive sequelae How individual neurons contribute to network activity and how network function responds to injury are key concepts in examining these areas In recent years the available tools for studying the role of neuronal assemblies in TBI have become increasingly sophisticated ranging from optogenetic and electrophysiological techniques to advanced imaging modalities such as functional magnetic resonance imaging and magnetoencephalography Further progress in understanding the disruption and subsequent reshaping of networks is likely to have substantial benefits in the treatment of patients with TBI associated deficits In this Frontiers Topic we intend to highlight the systems neuroscience approach to studying TBI In addition to analyzing the clinical sequelae of TBI in this context this series of articles explores the pathophysiological mechanisms underlying network dysfunction including alterations in synaptic activity changes in neural oscillation patterns and disruptions in functional connectivity We also include articles on treatment options for TBI patients that modulate network function It is our hope that this Frontiers Topic will increase the clinical and scientific communities awareness of this viable framework for deepening our knowledge of TBI and improving patient outcomes **Mitigation** Jeffrey A Pike, 2011-09-08 Nearly 50 000 Americans die from brain injuries annually with approximately half of all Traumatic Brain Injuries TBI being transportation related TBI is a critical and ever evolving safety topic with equally important components of injury prevention consequences and treatment This book is part of a 3 volume set which presents a comprehensive look at recent head injury research and applies protective strategies to various injury scenarios such as passenger vehicles sports and blast injuries or to a particular demographic group such as children or seniors This volume features 14 technical papers Editor Jeffrey A Pike has selected the most relevant technical

papers spanning the early 1990s through the beginning of 2011 including several older papers which provide an essential historical perspective Each volume in the series also includes a table of references arranged by topic and a new chapter tying together anatomy injury and injury mechanism topics Buy the Set and Save Head Injury Biomechanics The three volume set consists of these individual volumes Head Injury Biomechanics Volume 1 The Skull Head Injury Biomechanics Volume 2 The Brain Head Injury Biomechanics Volume 3 Mitigation Evidence-Based Practice in Exercise Science Amonette, William E.,English, Kirk,Kraemer, William,2016-01-28 Evidence Based Practice in Exercise Science The Six Step Approach equips readers with the basic skills and competencies to discern the value of scientific research and become evidence based practitioners **Get Through MRCPsych Paper B** Melvyn WB Zhang,Cyrus SH Ho,Roger CM Ho,Ian H Treasaden,Basant K Puri,2016-08-03 The MRCPsych examinations conducted by the Royal College of Psychiatrists are the most important exams for psychiatric trainees to achieve specialist accreditation Written by authors with recent exam success and edited by the distinguished team behind Revision Notes in Psychiatry Get Through MRCPsych Paper B Mock Examination Papers provides candidates with the most realistic and up to date MCQ and EMIs closely matched to themes appearing most often in the Paper B exam *Resources in Education* ,1998-07 **Landmark Papers in Neurosurgery** Reuben D. Johnson,Alexander L. Green,2014 Evidence based medicine is a concept that has come to the fore in the past few years Clinicians are increasingly encouraged to practise patient management based on available evidence in the scientific literature For example new pharmacological therapies are only used when large randomized trials have proven that a particular drug is better than existing ones This is also the case in surgical specialties although surgery has traditionally seen a lack of use of this information with individual surgeon s preferences being most influential in treatment choices However more recently there has been a large expansion of trials and studies aimed at providing surgeons with information to guide their choices using firm evidence This new edition has been revised and expanded to include new data where relevant and also features a new chapter on pituitary surgery Landmark Papers in Neurosurgery 2e remains a key collection of the most important trials and studies in neurosurgery allowing the reader to rapidly extract key results and making it essential reading for all neurosurgeons and trainees in the field **Landmark Papers in Neurology** Martin R. Turner,Matthew C. Kiernan,2015-08-20 Current understanding of neurological disease has been evolving over the past 150 years With the increasing and earlier sub specialization of neurology trainees and their variable exposure to higher academic study there is little opportunity to put this development into a historical context as a whole Understanding the evidence base or appreciating the lack of it in some cases is an important part of training but this is rarely presented in a palatable entertaining form Part of the Landmark Papers in series this book brings together the ten most important papers for each sub speciality within neurology covering the full range of major neurological conditions Papers have been selected by leading international experts who not only summarize what each paper showed but place them into a wider context that makes a
