**The Ecology of Agroecosystems** John Vandermeer, 2011 Agroecology is the science of applying ecological concepts and principles to the design development and management of sustainable agricultural systems The Ecology of Agroecosystems highlights a collection of alternative agricultural methodologies and philosophies and provides an interdisciplinary approach that bridges the sociopolitical and historical context of agriculture It includes the technical issues in a serious and ecological fashion and captures the complex merging of ecology agriculture politics and economics in both a historical and contemporary context Readers will learn not only about the ethical and moral elements related to producing food of questionable quality while possibly impairing the environment but also about the soil chemistry involved *A Beginner's Guide to Graph Theory* W.D. Wallis, 2000-06-15 Because of its wide applicability graph theory is one of the fast growing areas of modern mathematics Graphs arise as mathematical models in areas as diverse as management science chemistry resource planning and computing Moreover the theory of graphs provides a spectrum of methods of proof and is a good training ground for pure mathematics Thus many colleges and universities provide a first course in graph theory that is intended primarily for mathematics majors but accessible to other students at the senior level This text is intended for such a course I have presented this course many times Over the years classes have included mainly mathematics and computer science majors but there have been several engineers and occasional psychologists as well Often undergraduate and graduate

students are in the same class Many instructors will no doubt find themselves with similar mixed groups It is to be expected that anyone enrolling in a senior level mathematics course will be comfortable with mathematical ideas and notation In particular I assume the reader is familiar with the basic concepts of set theory has seen mathematical induction and has a passing acquaintance with matrices and algebra However one cannot assume that the students in a first graph theory course will have a good knowledge of any specific advanced area My reaction to this is to avoid too many specific prerequisites The main requirement namely a little mathematical maturity may have been acquired in a variety of ways
