Good School Maintenance Illinois Association of School Boards, Springfield, 1996 This manual published by the Illinois Association of School Boards was designed to be used as a teaching tool and reference source for overseeing effective school maintenance. Section 1 describes the basics of good school maintenance, including managing the program, using computers, controlling energy costs, ensuring safe practices, designing buildings for efficient maintenance, and being informed about environmental issues. Section 2 details guidelines for operating cleaning and general building services, such as custodial operations, area cleaning programs, and equipment and supplies. A custodian's glossary is included. The third section provides guidelines for building maintenance, specifically caring for the exterior and roof. Procedures for maintaining school grounds are detailed in the fourth section. The fifth section describes the maintenance of mechanical equipment, including heating and air conditioning systems, sanitary systems, and fixtures, sewage treatment plants, and electrical systems. A management tools appendix contains a list of environmental resources, sections on cleaning and general building services, grounds maintenance, and mechanical equipment, and annual inspection checklists.

LMI Energy Manual Manfred Hegger, Matthias Fuchs, Thomas Stark, Martin Zeumer, 2012-12-10 While the efficiency and sustainability offensive is in full swing in most sectors of the economy, in the construction sector it is still in its very beginnings, economically as well as ecologically. However, politicians and policymakers at the global, European, and national levels have begun to address this deficit and are seeking to correct it with legal requirements and laws like EnEV, building certifications, and competitions. Following the proven model of earlier manuals in the series, the Energy Manual presents a comprehensive look at the constructional parameters of energy efficiency and sustainability. It offers an advance look at the legal regulations being planned by the EU and as a tool ready for immediate use by architects, engineers, and designers in their daily work, it points the way toward the efficient and sustainable construction and operation of buildings. With its focus on the entire lifecycle of a building, it provides an integrated perspective, a necessary prerequisite for sustainable economic management.
