1. The first step in the process of identifying a research problem is to determine the general area of interest. This involves a broad search of the literature to identify key concepts and theories. The next step is to narrow down the focus of the study by identifying specific research questions or hypotheses. This is often done through a review of the literature and consultation with experts in the field. The final step is to develop a research plan that outlines the methods and procedures to be used in the study. This plan should be flexible enough to allow for changes as the researcher gains more information about the problem.
